2007 ENGINE 1.8L - Service Information - Caliber

2007 ENGINE

1.8L - Service Information - Caliber

DESCRIPTION

1.8L ENGINE

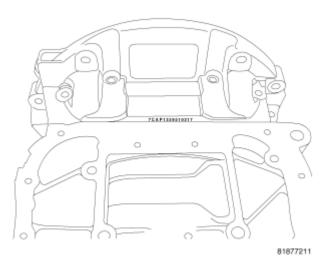

Fig. 1: Locating Engine Serial Number Courtesy of CHRYSLER LLC

The 1.8 Liter (110 cu. in.) in-line four cylinder engine is a double overhead camshaft with mechanical lash buckets and four valves per cylinder design. This engine is NOT free-wheeling; meaning that the pistons will contact the valves in the event of a timing chain failure.

The cylinders are numbered from front of the engine to the rear. The firing order is 1-3-4-2.

The engine serial number is located on the rear of the cylinder block. The serial number contains engine build date information.

DIAGNOSIS AND TESTING

ENGINE OIL LEAK INSPECTION

Begin with a thorough visual inspection of the engine, particularly at the area of the suspected leak. If an oil leak source is not readily identifiable, the following steps should be followed:

- 1. Do not clean or degrease the engine at this time because some solvents may cause rubber to swell, temporarily stopping the leak.
- 2. Add an oil soluble dye (use as recommended by manufacturer). Start the engine and let idle for approximately 15 minutes. Check the oil dipstick to make sure the dye is thoroughly mixed as indicated with a bright yellow color under a black light.

2007 ENGINE 1.8L - Service Information - Caliber

- 3. Using a black light, inspect the entire engine for fluorescent dye, particularly at the suspected area of oil leak. If the oil leak is found and identified, repair as necessary.
- 4. If dye is not observed, drive the vehicle at various speeds for approximately 24 km (15 miles), and repeat inspection.
- 5. **If the oil leak source is not positively identified at this time**, proceed with the AIR LEAK DETECTION TEST METHOD as follows:

Disconnect the fresh air hose (make-up air) at the cylinder head cover and plug or cap the nipple on the cover.

Remove the PCV valve hose from the cylinder head cover. Cap or plug the PCV valve nipple on the cover.

Attach an air hose with pressure gauge and regulator to the dipstick tube.

CAUTION: Do not subject the engine assembly to more than 20.6 kPa (3 psi) of test pressure.

Gradually apply air pressure from 1 psi to 2.5 psi maximum while applying soapy water at the suspected source. Adjust the regulator to the suitable test pressure that provides the best bubbles which will pinpoint the leak source. If the oil leak is detected and identified, repair per service information procedures.

If the leakage occurs at the crankshaft rear oil seal area, refer to the section, Inspection for Rear Seal Area Leak.

- 6. If no leaks are detected, turn off the air supply. Remove the air hose, all plugs, and caps. Install the PCV valve and fresh air hose (make-up air). Proceed to next step.
- 7. Clean the oil off the suspect oil leak area using a suitable solvent. Drive the vehicle at various speeds approximately 24 km (15 miles). Inspect the engine for signs of an oil leak by using a black light.

NOTE:

If oil leakage is observed at the dipstick tube to block location; remove the tube, clean and reseal using Mopar® Stud & Bearing Mount (press fit tube applications only), and for O-ring style tubes, remove tube and replace the O-ring seal.

INSPECTION FOR REAR SEAL AREA LEAKS

Since it is sometimes difficult to determine the source of an oil leak in the rear seal area of the engine, a more involved inspection is necessary. The following steps should be followed to help pinpoint the source of the leak.

If the leakage occurs at the crankshaft rear oil seal area:

- 1. Disconnect the battery.
- 2. Raise the vehicle.
- 3. Remove torque converter or clutch housing cover and inspect rear of block for evidence of oil. Use a black light to check for the oil leak. If a leak is present in this area, remove transmission for further inspection.
 - Circular spray pattern generally indicates seal leakage or crankshaft damage.

domingo,	.31 d	e enero	de 2021	12:59:57	a. m.
aciiiiiigo,		0 011010	40 202 1	12.00.01	u

2007 ENGINE 1.8L - Service Information - Caliber

- Where leakage tends to run straight down, possible causes are a porous block, oil gallery cup plug, bedplate to cylinder block mating surfaces and seal bore. See proper repair procedures for these items.
- 4. If no leaks are detected, pressurize the crankcase as described in step 5 under ENGINE OIL LEAK INSPECTION.

CAUTION: Do not exceed 20.6 kPa (3 psi).

5. If the leak is not detected, very slowly turn the crankshaft and watch for leakage. If a leak is detected between the crankshaft and seal while slowly turning the crankshaft, it is possible the crankshaft seal surface is damaged. The seal area on the crankshaft could have minor nicks or scratches that can be polished out with emery cloth.

CAUTION: Use extreme caution when crankshaft polishing is necessary to remove minor nicks and scratches. The crankshaft seal flange is especially machined to complement the function of the rear oil seal.

- 6. For bubbles that remain steady with shaft rotation, no further inspection can be done until disassembled.
- 7. After the oil leak root cause and appropriate corrective action have been identified, replace component(s) as necessary.

ENGINE DIAGNOSIS - PERFORMANCE

CONDITION	POSSIBLE CAUSE	CORRECTION
ENGINE WILL NOT START	1. Weak battery.	1. Test battery. Charge or replace as necessary. Refer to DIAGNOSIS AND TESTING .
	2. Corroded or loose battery connections.	2. Clean and tighten battery connections. Apply a coat of light mineral grease to terminals.
	3. Faulty starter.	3. Test starting system. Check for codes. (Refer to Appropriate Diagnostic Information)
	4. Faulty coil(s) or control unit.	4. Test and replace as needed. (Refer to Appropriate Diagnostic Information)
	5. Incorrect spark plug gap.	5. Set gap. Refer to SPECIFICATIONS .
	6. Contamination in fuel system.	6. Clean system and replace fuel filter.
	7. Faulty fuel pump.	7. Test fuel pump and replace as needed. (Refer to Appropriate Diagnostic Information)
8. Incorrect engine timing.	8. Check for a skipped timing	

2007 ENGINE 1.8L - Service Information - Caliber

	belt/chain.	
ENGINE STALLS OR IDLES ROUGH	1. Idle speed too low.	1. Test minimum air flow. (Refer to Appropriate Diagnostic Information)
	2. Incorrect fuel mixture.	2. (Refer to Appropriate Diagnostic Information)
	3. Intake manifold leakage.	3. Inspect intake manifold, manifold gasket, and vacuum hoses.
	4. Faulty ignition coil(s).	4. Test and replace as necessary. (Refer to Appropriate Diagnostic Information)
	5. Contamination in Oil Control Valve (OCV).	5. Remove OCV and inspect for contamination. Replace OCV if contaminated or sticking.
ENGINE LOSS OF POWER	1. Dirty or incorrectly gapped plugs.	1. Clean plugs and set gap.
	2. Contamination in fuel system.	2. Clean system and replace fuel filter.
	3. Faulty fuel pump.	3. Test and replace as necessary. (Refer to Appropriate Diagnostic Information)
	4. Incorrect valve timing.	4. Correct valve timing.
	5. Leaking cylinder head gasket.	5. Replace cylinder head gasket.
	6. Low compression.	6. Test compression of each cylinder.
	7. Burned, warped, or pitted valves.	7. Replace valves.
	8. Plugged or restricted exhaust system.	8. Perform exhaust restriction test. Install new parts. Refer to DIAGNOSIS AND TESTING ., as
		necessary.
	9. Faulty ignition coil(s).	9. Test and replace as necessary. (Refer to Appropriate Diagnostic Information)
ENGINE MISSES ON ACCELERATION	1. Dirty or incorrectly gapped spark plugs.	1. Clean spark plugs and set gap.
	2. Contamination in Fuel System.	2. Clean fuel system and replace fuel filter.
	3. Burned, warped, or pitted valves.	3. Replace valves.
	4. Faulty ignition coil(s).	4. Test and replace as necessary. (Refer to Appropriate Diagnostic Information)
ENGINE MISSES AT HIGH SPEED	1. Dirty or incorrect spark plug gap.	1. Clean spark plugs and set gap.
	2. Faulty ignition coil(s).	2. Test and replace as necessary. (Refer to Appropriate Diagnostic

	Information)
	3. Test and replace as necessary.
	(Refer to Appropriate Diagnostic
	Information)
4. Contamination in fuel system.	4. Clean system and replace fuel
	filter.

2007 Dodge Caliber SE

2007 ENGINE 1.8L - Service Information - Caliber

CYLINDER COMBUSTION PRESSURE LEAKAGE TEST

The combustion pressure leakage test provides an accurate means for determining engine condition.

Combustion pressure leakage testing will detect:

Exhaust and intake valve leaks (improper seating).

Leaks between adjacent cylinders or into water jacket.

Any causes for combustion/compression pressure loss.

WARNING: Do not remove the pressure cap with the system hot and under pressure because serious burns from coolant can occur.

- 1. Check the coolant level and fill as required. DO NOT install the pressure cap.
- 2. Start and operate the engine until it attains normal operating temperature, then turn the engine OFF.
- 3. Clean spark plug recesses with compressed air.
- 4. Remove the spark plugs.
- 5. Remove the oil filler cap.
- 6. Remove the air cleaner.
- 7. Calibrate the tester according to the manufacturer's instructions. The shop air source for testing should maintain 483 kPa (70 psi) minimum, 1,379 kPa (200 psi) maximum, with 552 kPa (80 psi) recommended.
- 8. Perform the test procedures on each cylinder according to the tester manufacturer's instructions. While testing, listen for pressurized air escaping through the throttle body, tailpipe and oil filler cap opening. Check for bubbles in the coolant.
- 9. All gauge pressure indications should be equal, with no more than 25% leakage per cylinder.
- 10. **FOR EXAMPLE:** At 552 kPa (80 psi) input pressure, a minimum of 414 kPa (60 psi) should be maintained in the cylinder.

ENGINE DIAGNOSIS - INTRODUCTION

Engine diagnosis is helpful in determining the causes of malfunctions not detected and remedied by routine maintenance.

These malfunctions may be classified as either mechanical (e.g, a strange noise), or performance (e.g, engine idles rough and stalls).

domingo, 31 de enero de 2021 12:59:57 a. m.	Page 5	© 2011 Mitchell Repair Information Company, LLC.

2007 ENGINE 1.8L - Service Information - Caliber

Refer to the Engine Mechanical and the Engine Performance diagnostic charts, for possible causes and corrections of malfunctions. See **DIAGNOSIS AND TESTING**. See **DIAGNOSIS AND TESTING**.

For fuel system diagnosis, see **DIAGNOSIS AND TESTING**.

Additional tests and diagnostic procedures may be necessary for specific engine malfunctions that cannot be isolated with the Service Diagnosis charts. Information concerning additional tests and diagnosis is provided within the following:

Cylinder Compression Pressure Test
Cylinder Combustion Pressure Leakage Test
Engine Cylinder Head Gasket Failure Diagnosis
Intake Manifold Leakage Diagnosis
Mechanical Valve Tappet Noise Diagnosis
Engine Oil Leak Inspection

	3. Carbon in oil ring slots.4. Rings fitted too tightly in grooves.	3. Install new rings.4. Remove rings and check grooves. If groove is not proper width, replace piston.	
	5. Worn valve guide(s).6. Valve stem seal(s) worn or damaged.	5. Replace cylinder head.6. Replace seal(s).	

CYLINDER COMPRESSION PRESSURE TEST

The results of a cylinder compression pressure test can be utilized to diagnose several engine malfunctions.

Ensure the battery is completely charged and the engine starter motor is in good operating condition. Otherwise the indicated compression pressures may not be valid for diagnosis purposes.

- 1. Check engine oil level and add oil if necessary.
- 2. Drive the vehicle until engine reaches normal operating temperature. Select a route free from traffic and other forms of congestion, observe all traffic laws, and accelerate through the gears several times briskly.
- 3. Remove engine cover.
- 4. Disconnect coil electrical connectors and remove coils.
- 5. Remove all spark plugs from engine. As spark plugs are being removed, check electrodes for abnormal firing indicators fouled, hot, oily, etc. Record cylinder number of spark plug for future reference.
- 6. Disconnect injector electrical connectors.
- 7. Insert compression gauge adaptor Special Tool 8116 or the equivalent, into the #1 spark plug hole in cylinder head. Connect the 0-500 psi (Blue) pressure transducer (Special Tool CH7059) with cable adaptors to the DRBIII®. For Special Tool identification, see **SPECIAL TOOLS**.
- 8. Crank engine until maximum pressure is reached on gauge. Record this pressure as #1 cylinder pressure.
- 9. Repeat the previous step for all remaining cylinders.
- 10. Compression should not be less than 689 kPa (100 psi) and not vary more than 25 percent from cylinder to cylinder.
- 11. If one or more cylinders have abnormally low compression pressures, repeat the compression test.
- 12. If the same cylinder or cylinders repeat an abnormally low reading on the second compression test, it could indicate the existence of a problem in the cylinder in question. The recommended compression pressures are to be used only as a guide to diagnosing engine problems. An engine should not be disassembled to determine the cause of low compression unless some malfunction is present.

CYLINDER HEAD GASKET

A cylinder head gasket leak can be located between adjacent cylinders, between a cylinder and the adjacent water jacket or from an oil passage to the exterior of the engine.

Possible indications of the cylinder head gasket leaking between adjacent cylinders are:

• Loss of engine power

domingo, 31 de enero de 2021 12:59:57 a.m.	Page 8	© 2011 Mitchell Repair Information Company, LLC.
--	--------	--

2007 ENGINE 1.8L - Service Information - Caliber

- Engine misfiring
- Poor fuel economy

Possible indications of the cylinder head gasket leaking between a cylinder and an adjacent water jacket are:

- Engine overheating
- Loss of coolant
- Excessive steam (white smoke) emitting from exhaust
- Coolant foaming

CYLINDER-TO-CYLINDER LEAKAGE TEST

To determine if an engine cylinder head gasket is leaking between adjacent cylinders, follow the procedures in Cylinder Compression Pressure Test. See <u>DIAGNOSIS AND TESTING</u>. An engine cylinder head gasket leaking between adjacent cylinders will result in approximately a 50-70% reduction in compression pressure.

CYLINDER-TO-WATER JACKET LEAKAGE TEST

WARNING: USE EXTREME CAUTION WHEN THE ENGINE IS OPERATING WITH COOLANT PRESSURE CAP REMOVED.

VISUAL TEST METHOD

With the engine cool, remove the coolant pressure cap. Start the engine and allow it to warm up until thermostat opens.

If a large combustion/compression pressure leak exists, bubbles will be visible in the coolant.

COOLING SYSTEM TESTER METHOD

WARNING: WITH COOLING SYSTEM TESTER IN PLACE, PRESSURE WILL BUILD UP FAST. EXCESSIVE PRESSURE BUILT UP, BY CONTINUOUS ENGINE OPERATION, MUST BE RELEASED TO A SAFE PRESSURE POINT. NEVER PERMIT PRESSURE TO EXCEED 138 kPa (20 psi).

Install Cooling System Tester 7700 or equivalent to pressure cap neck. Start the engine and observe the tester's pressure gauge. If gauge pulsates with every power stroke of a cylinder a combustion pressure leak is evident.

CHEMICAL TEST METHOD

Combustion leaks into the cooling system can also be checked by using combustion leak tester C-3685-A or equivalent. Perform test following the procedures supplied with the tool kit.

STANDARD PROCEDURE

		domingo.	31	de	enero	de	2021	12:59:57	a. m.
--	--	----------	----	----	-------	----	------	----------	-------

2007 ENGINE 1.8L - Service Information - Caliber

HYDROSTATIC LOCKED ENGINE

When an engine is suspected to be hydrostatically locked, regardless of what caused the problem, the following steps should be used.

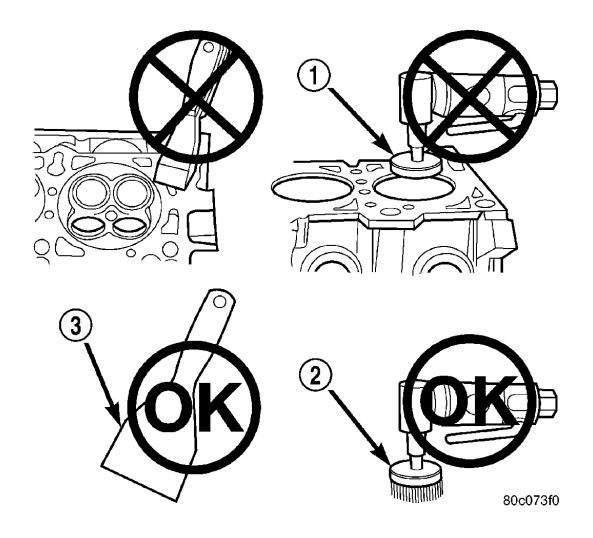

CAUTION: DO NOT use starter motor to rotate the engine, severe damage may occur.

- 1. Inspect air cleaner, induction system and intake manifold to insure system is dry and clear of foreign material.
- 2. Remove negative battery cable.
- 3. Place a shop towel around the spark plugs when removing them from the engine. This will catch any fluid that may possibly be in the cylinder under pressure.
- 4. With all spark plugs removed, rotate engine crankshaft using a breaker bar and socket.
- 5. Identify the fluid in the cylinder(s) (i.e, coolant, fuel, oil or other).
- 6. Make sure all fluid has been removed from the cylinders. Inspect engine for damage (i.e, connecting rods, pistons, valves, etc.)
- 7. Repair engine or components as necessary to prevent this problem from re-occurring.

CAUTION: Squirt approximately one teaspoon of oil into the cylinders, rotate engine to lubricate the cylinder walls to prevent damage on restart.

- 8. Install new spark plugs.
- 9. Drain engine oil and remove oil filter.
- 10. Install a new oil filter.
- 11. Fill engine with specified amount of approved oil.
- 12. Connect negative battery cable.
- 13. Start engine and check for any leaks.

ENGINE GASKET SURFACE PREPARATION

<u>Fig. 2: Proper Tool Usage for Surface Preparation</u> Courtesy of CHRYSLER LLC

To ensure engine gasket sealing, proper surface preparation must be performed, especially with the use of aluminum engine components and multi-layer steel cylinder head gaskets.

Never use the following to clean gasket surfaces:

Metal scraper.

Abrasive pad or paper to clean cylinder block and head.

High speed power tool with an abrasive pad or a wire brush (1).

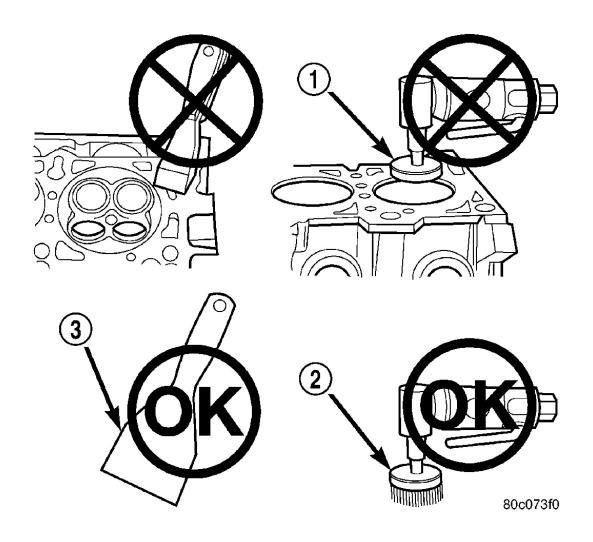

Fig. 3: Proper Tool Usage for Surface Preparation Courtesy of CHRYSLER LLC

NOTE: Multi-Layer Steel (MLS) head gaskets require a scratch free sealing surface.

Only use the following for cleaning gasket surfaces:

Solvent or a commercially available gasket remover

Plastic or wood scraper (3).

Drill motor with 3M RolocTM Bristle Disc (white or yellow) (2).

CAUTION: Excessive pressure or high RPM (beyond the recommended speed), can damage the sealing surfaces. The mild (white, 120 grit) bristle disc is recommended. If necessary, the medium (yellow, 80 grit) bristle disc may be used on cast iron surfaces with care.

2007 ENGINE 1.8L - Service Information - Caliber

Sealing surfaces must be free of grease or oil residue. Clean surfaces with Mopar® brake parts cleaner (or equivalent).

ENGINE CORE AND OIL GALLERY PLUGS

CYLINDER HEAD CORE PLUGS

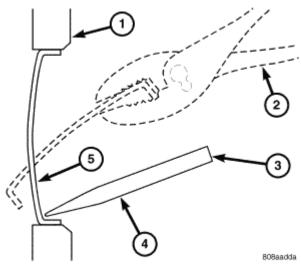

Fig. 4: CORE HOLE PLUG REMOVAL Courtesy of CHRYSLER LLC

Using a blunt tool (3) such as a drift and a hammer, strike the bottom edge of the cup plug (5). With the cup plug rotated, grasp firmly with pliers or other suitable tool (2) and remove plug (5).

CAUTION: Do not drive cup plug into the casting as restricted cooling can result and cause serious engine problems.

Thoroughly clean inside of cup plug hole in cylinder head. Be sure to remove old sealer. Lightly coat inside of cup plug hole with Mopar® Stud and Bearing Mount (or equivalent). Make certain the new plug is cleaned of all oil or grease. Using proper drive plug, drive plug into hole so that the sharp edge of the plug is at least 0.5 mm (0.020 in.) inside the lead-in chamfer.

It is not necessary to wait for curing of the sealant. The cooling system can be refilled and the vehicle placed in service immediately.

CYLINDER BLOCK MAIN OIL GALLERY PLUGS

2007 ENGINE 1.8L - Service Information - Caliber

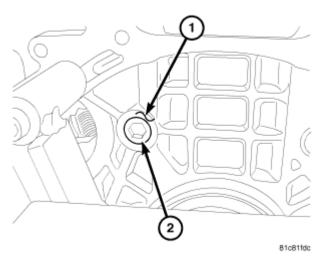

Fig. 5: GALLERY PLUG Courtesy of CHRYSLER LLC

CAUTION: Excessive use of brake parts cleaner to clean threads in block could cause #5 main bearing failure.

- 1. Use Mopar® Brake Parts Cleaner (or equivalent) sparingly to clean plug and block.
- 2. Coat plug threads with Mopar® Thread Sealant (or equivalent).
- 3. Install plug (2). The plug (2) is correctly installed when it is protruding 1 mm to flush with the block boss face (1).

ENGINE GASKET SURFACE PREPARATION

Fig. 6: Precautions In Gasket Surface Preparation Courtesy of CHRYSLER LLC

To ensure engine gasket sealing, proper surface preparation must be performed, especially with the use of

2007 ENGINE 1.8L - Service Information - Caliber

aluminum engine components and multi-layer steel cylinder head gaskets.

Never use the following to clean gasket surfaces:

Metal scraper (1).

Abrasive pad or paper to clean cylinder block and head

High speed power tool with an abrasive pad (2).

High speed power tool with 3M RolocTM Bristle Disc (white or yellow) or a wire brush (3).

NOTE: Multi-Layer Steel (MLS) head gaskets require a scratch free sealing surface.

CAUTION: The use of unapproved cleaning methods can cause severe engine damage.

Only use the following for cleaning gasket surfaces:

Solvent or a commercially available gasket remover.

Plastic or wood scraper (4).

FORM-IN-PLACE GASKETS AND SEALERS

NOTE: All of the sealants mentioned below are not used on every engine, they are listed as a general reference guide. See service information for specific sealer usage.

There are numerous places where form-in-place gaskets are used on the engine. Care must be taken when applying form-in-place gaskets to assure obtaining the desired results. **Do not use form-in-place gasket material unless specified.** Bead size, continuity, and location are of great importance. Too thin a bead can result in leakage while too much can result in spill-over which can break off and obstruct fluid feed lines. A continuous bead of the proper width is essential to obtain a leak-free gasket. All sealing surfaces that use form-in-place gaskets and sealers **must** free of grease or oil. Surfaces should be cleaned with Mopar® brake parts cleaner prior to sealer application. After the sealer is applied, the parts should be assembled in no more than 10 minutes.

There are numerous types of form-in-place gasket materials that are used in the engine area. Mopar® Engine RTV GEN II, Mopar® ATF-RTV, and Mopar® Gasket Maker gasket materials, each have different properties and can not be used in place of the other.

MOPAR® ENGINE RTV GEN II is used to seal components exposed to engine oil. This material is a specially designed black silicone rubber RTV that retains adhesion and sealing properties when exposed to engine oil. Moisture in the air causes the material to cure. This material is available in three ounce tubes and has a shelf life of one year. After one year this material will not properly cure. Always inspect the package for the expiration date before use.

MOPAR® ATF RTV is a specifically designed black silicone rubber RTV that retains adhesion and sealing

lldo	ominao.	31	de	enero	de	2021	12:59:57	a. m.
------	---------	----	----	-------	----	------	----------	-------

2007 ENGINE 1.8L - Service Information - Caliber

properties to seal components exposed to automatic transmission fluid, engine coolants, and moisture. This material is available in three ounce tubes and has a shelf life of one year. After one year this material will not properly cure. Always inspect the package for the expiration date before use.

MOPAR® GASKET MAKER is an anaerobic type gasket material. The material cures in the absence of air when squeezed between two metallic surfaces. It will not cure if left in the uncovered tube. The anaerobic material is for use between two machined surfaces. Do not use on flexible metal flanges.

MOPAR® BED PLATE SEALANT is a unique (green-in-color) anaerobic type gasket material that is specially made to seal the area between the bed plate and cylinder block without disturbing the bearing clearance or alignment of these components. The material cures slowly in the absence of air when torqued between two metallic surfaces, and will rapidly cure when heat is applied.

SEALER APPLICATION

Mopar® Gasket Maker material should be applied sparingly 1 mm (0.040 in.) diameter or less of sealant to one gasket surface. Be certain the material surrounds each mounting hole. Excess material can easily be wiped off. Components should be torqued in place within 15 minutes. The use of a locating dowel is recommended during assembly to prevent smearing material off the location.

Mopar® Engine RTV GEN II or ATF RTV gasket material should be applied in a continuous bead approximately 3 mm (0.120 in.) in diameter. All mounting holes must be circled. For corner sealing and "T" joint locations, a 3.17 or 6.35 mm (1/8 or 1/4 in.) drop is placed in the center of the gasket contact area. Uncured sealant may be removed with a shop towel. Components should be torqued in place while the sealant is still wet to the touch (within 10 minutes). The usage of a locating dowel is recommended during assembly to prevent smearing material off the location.

MEASURING BEARING CLEARANCE USING PLASTIGAGE

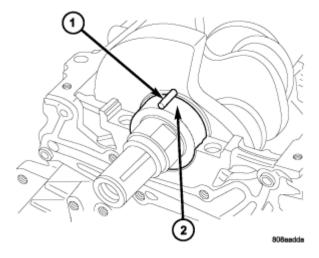

Fig. 7: Plastigage Placed in Lower Shell-Typical Courtesy of CHRYSLER LLC

Engine crankshaft bearing clearances can be determined by use of Plastigage or equivalent. The following is the

2007 ENGINE 1.8L - Service Information - Caliber

recommended procedure for the use of Plastigage:

- 1. Remove oil film from surface to be checked. Plastigage is soluble in oil.
- 2. Place a piece of Plastigage (1) across the entire width of the journal. (In addition, suspected areas can be checked by placing the Plastigage in the suspected area). Torque the bearing cap bolts of the bearing being checked to the proper specifications.
- 3. Remove the bearing cap and compare the width of the flattened Plastigage with the scale provided on the package. Locate the band closest to the same width. This band shows the amount of clearance. Differences in readings between the ends indicate the amount of taper present. Record all readings taken. Compare clearance measurements to specs found in engine specifications. See <u>SPECIFICATIONS</u>. Plastigage generally is accompanied by two scales. One scale is in inches, the other is a metric scale.

NOTE: Plastigage is available in a variety of clearance ranges. Use the most appropriate range for the specifications you are checking.

4. Install the proper crankshaft bearings to achieve the specified bearing clearances.

REPAIR OF DAMAGED OR WORN THREADS

Damaged or worn threads (excluding spark plug and camshaft bearing cap attaching threads) can be repaired. Essentially, this repair consists of drilling out worn or damaged threads, tapping the hole with a special Heli-Coil Tap, (or equivalent) and installing an insert into the tapped hole. This brings the hole back to its original thread size.

CAUTION: Be sure that the tapped holes maintain the original center line.

Heli-Coil tools and inserts are readily available from automotive parts jobbers.

REMOVAL

- 20. Remove harness from intake (2).
- 21. Remove throttle body support bracket (1).

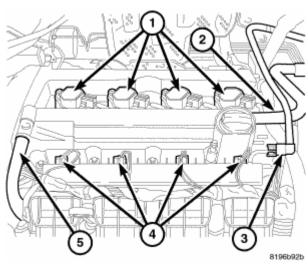

Fig. 18: COIL CONNECTOR
Courtesy of CHRYSLER LLC

- 22. Disconnect electronic throttle control and manifold flow control valve electrical connectors.
- 23. Remove PCV hose (5), and make-up air hose (2) from valve cover.
- 24. Remove dipstick.

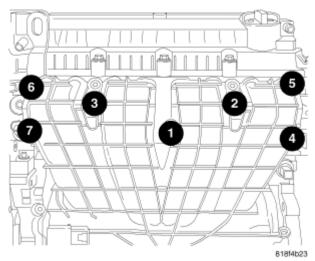

Fig. 19: TORQUE SEQUENCE Courtesy of CHRYSLER LLC

- 25. Remove intake bolts (1-7) and remove intake.
- 26. Disconnect electrical connectors and reposition harness.
- 27. Remove accessory drive belt.

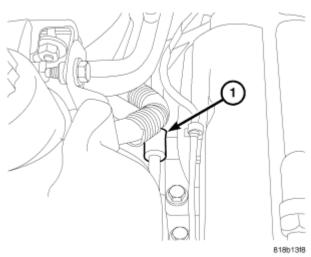

Fig. 20: POWER STEERING LINE SUPPORT Courtesy of CHRYSLER LLC

- 28. Remove power steering line support at engine mount (1) and exhaust manifold.
- 29. Remove power steering pump and set aside.
- 30. Remove upper idler pulley.

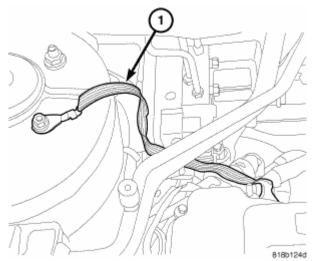

Fig. 21: GROUND STRAP Courtesy of CHRYSLER LLC

- 31. Remove ground strap near right tower.
- 32. Raise vehicle.
- 33. Remove right front tire.
- 34. Remove splash shield.

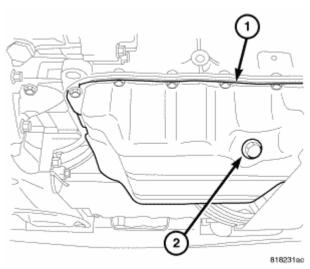

Fig. 22: OIL DRAIN PLUG Courtesy of CHRYSLER LLC

35. Drain oil (2).

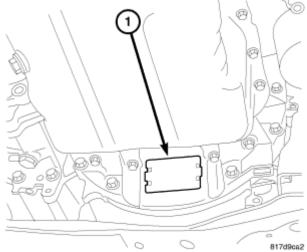

Fig. 23: INSPECTION COVER Courtesy of CHRYSLER LLC

36. Remove inspection cover (1) and mark torque converter to flywheel.

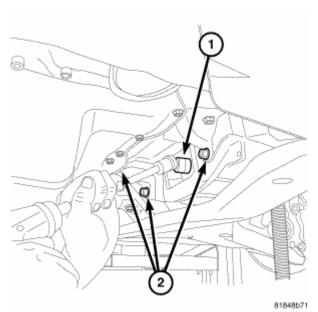

Fig. 24: MODULAR CLUTCH TO FLEX PLATE BOLTS Courtesy of CHRYSLER LLC

- 37. Remove torque converter bolts (1).
- 38. Remove lower bellhousing bolts (2).

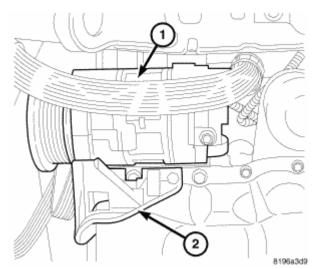

Fig. 25: A/C COMPRESSOR Courtesy of CHRYSLER LLC

- 39. Remove A/C compressor (1) mounting bolts.
- 40. Remove generator and lower idler pulley.

2007 ENGINE 1.8L - Service Information - Caliber

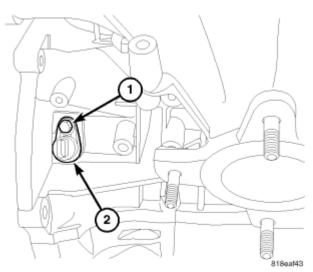

Fig. 26: CRANKSHAFT POSITION SENSOR Courtesy of CHRYSLER LLC

41. Disconnect crankshaft position sensor electrical connector and remove crankshaft position sensor (2).

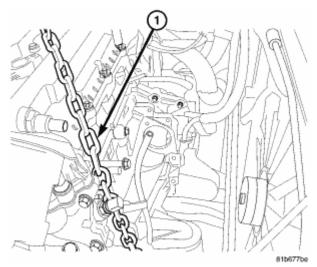

Fig. 27: LIFT CHAIN
Courtesy of CHRYSLER LLC

- 42. Remove exhaust variable valve timing solenoid.
- 43. Install engine lift chain (1) as shown to cylinder head.
- 44. Connect the chain to the rear engine lift hook.

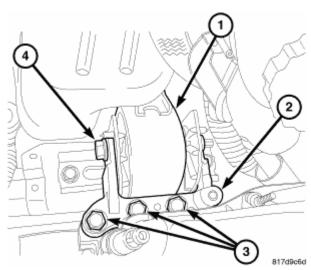

Fig. 28: RIGHT ENGINE MOUNT Courtesy of CHRYSLER LLC

- 45. Remove right engine mount through bolt (4).
- 46. Remove engine mount adapter retaining bolts (3) and mount adapter (2).
- 47. Lift engine from engine compartment using a suitable crane.

INSTALLATION

ENGINE COVER

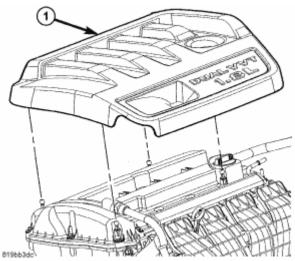

Fig. 29: ENGINE COVER Courtesy of CHRYSLER LLC

- 1. Position engine cover (1) over mounting studs.
- 2. Seat the cover on the rear studs by pushing downwards.
- 3. Push downward on the front of the cover to seat the front studs.

ENGINE ASSEMBLY

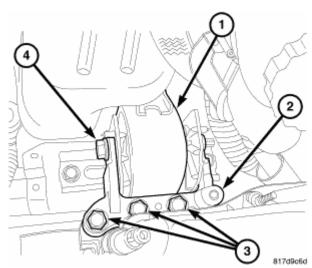

Fig. 30: RIGHT ENGINE MOUNT Courtesy of CHRYSLER LLC

- 1. Position engine assembly over vehicle and slowly lower the engine into place.
- 2. Continue lowering engine until engine and transaxle are aligned to mounting locations.
- 3. Install engine mount adapter (2) and tighten bolts (3). Install mount through bolt (4) and tighten to 118 N.m (87 ft. lbs.).

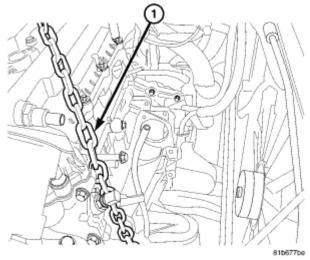

Fig. 31: LIFT CHAIN
Courtesy of CHRYSLER LLC

- 4. Remove engine lift chain (1).
- 5. Install oil control valve.

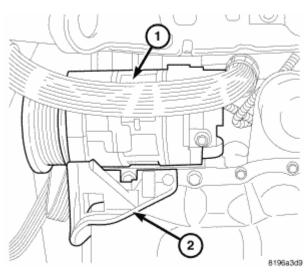

Fig. 32: A/C COMPRESSOR Courtesy of CHRYSLER LLC

- 6. Raise vehicle.
- 7. Install A/C compressor (1).

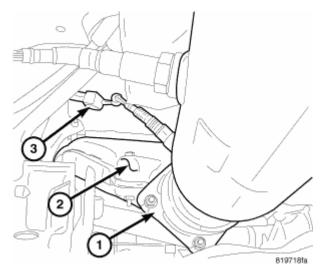

Fig. 33: CAT AT EXHAUST MANIFOLD Courtesy of CHRYSLER LLC

- 8. Install exhaust manifold and heat shields (2). See **INSTALLATION**.
- 9. Install oxygen sensor and connect electrical connector (3).

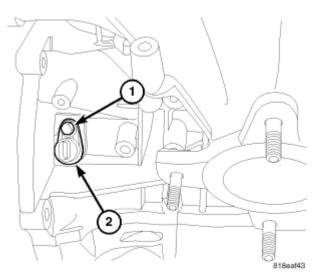

Fig. 34: CRANKSHAFT POSITION SENSOR Courtesy of CHRYSLER LLC

10. Install crankshaft position sensor (2) and connect connector.

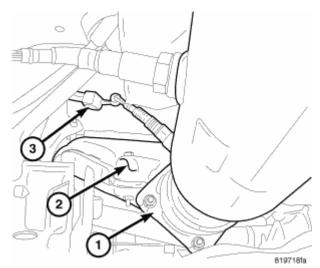

Fig. 35: CAT AT EXHAUST MANIFOLD Courtesy of CHRYSLER LLC

- 11. Install manifold to exhaust pipe bolts (1) and tighten bolts.
- 12. Install generator.

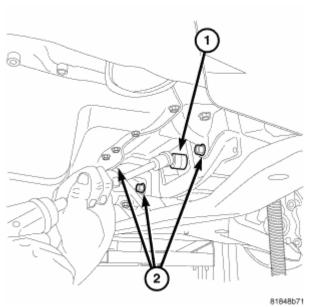

Fig. 36: MODULAR CLUTCH TO FLEX PLATE BOLTS Courtesy of CHRYSLER LLC

- 13. Install lower bell housing bolts (2) and tighten bolts.
- 14. Align torque converter and flex plate mark. Install torque converter bolts (1) and tighten.

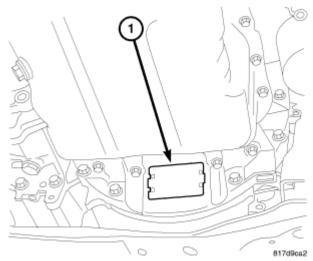

Fig. 37: INSPECTION COVER Courtesy of CHRYSLER LLC

15. Install inspection cover (1).

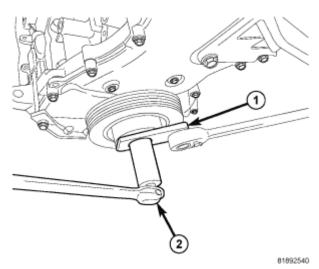

Fig. 38: DAMPER REMOVAL Courtesy of CHRYSLER LLC

- 16. Install crankshaft damper
- 17. Install Damper holder 9707 (1).
- 18. Apply clean engine oil crankshaft damper bolt threads and between bolt head and washer. Tighten bolt to 210 N.m (155 ft. lbs.).
- 19. Install right splash shield.
- 20. Install tire.

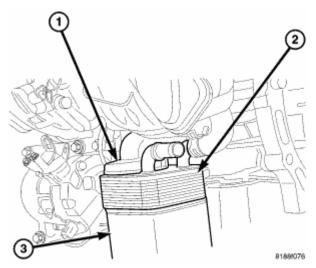

Fig. 39: OIL COOLER Courtesy of CHRYSLER LLC

- 21. Install coolant hose to oil cooler (2).
- 22. Install new oil filter (3).
- 23. Lower vehicle.
- 24. Install upper idler pulley.

2007 ENGINE 1.8L - Service Information - Caliber

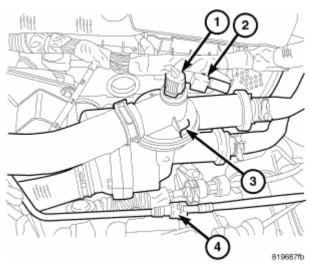

Fig. 40: COOLANT ADAPTER Courtesy of CHRYSLER LLC

25. Install coolant adapter assembly (3).

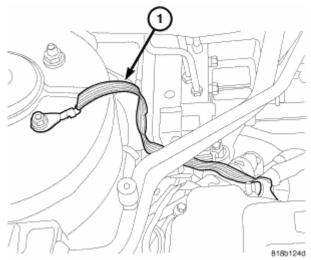

Fig. 41: GROUND STRAP Courtesy of CHRYSLER LLC

26. Install Ground strap (1) near right strut tower.

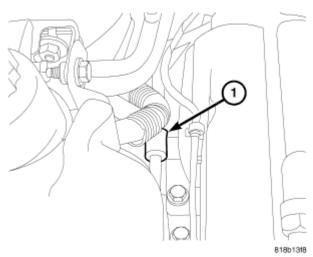

Fig. 42: POWER STEERING LINE SUPPORT Courtesy of CHRYSLER LLC

- 27. Install power steering line support bracket (1).
- 28. Install power steering pump.
- 29. Install accessory drive belt.
- 30. Connect electrical connectors at block ground, starter, A/C compressor, knock sensor, Oil pressure sensor, generator, Coolant temperature sensor at block, and block heater (if equipped).

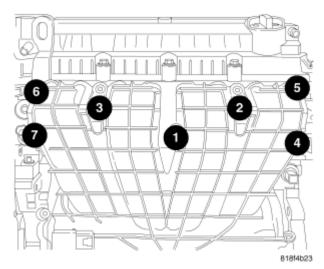

Fig. 43: TORQUE SEQUENCE Courtesy of CHRYSLER LLC

31. Install intake manifold and tighten bolts as shown.

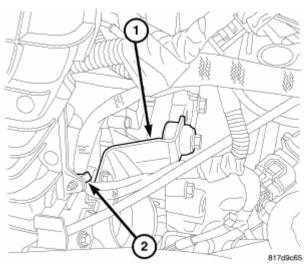

Fig. 44: THROTTLE BODY SUPPORT Courtesy of CHRYSLER LLC

- 32. Install throttle body support bracket (1).
- 33. Install harness retainer (2).
- 34. Install engine oil level indicator.

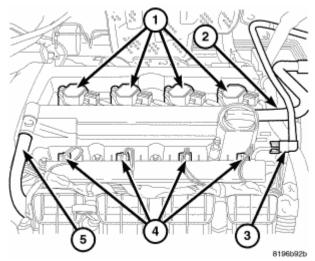

Fig. 45: COIL CONNECTOR
Courtesy of CHRYSLER LLC

- 35. Install PCV hose (5) to valve cover.
- 36. Install make-up air hose (2).
- 37. Connect manifold flow control valve and electronic throttle control electrical connectors.
- 38. Install vacuum lines at throttle body and intake manifold.
- 39. Install intake air tube to throttle body.

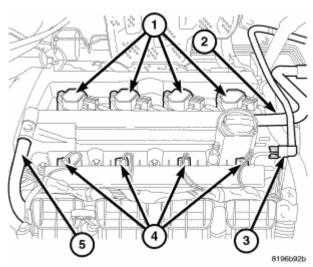

Fig. 46: COIL CONNECTOR
Courtesy of CHRYSLER LLC

- 40. Connect coil electrical connectors (1).
- 41. Connect injector electrical connectors (4).
- 42. Connect fuel line (3) to rail.
- 43. Connect intake and exhaust oil control valve electrical connectors.

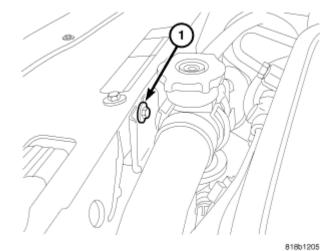

Fig. 47: RADIATOR HOSE SUPPORT Courtesy of CHRYSLER LLC

- 44. Install grill trim panel.
- 45. Install upper radiator support bracket (1).

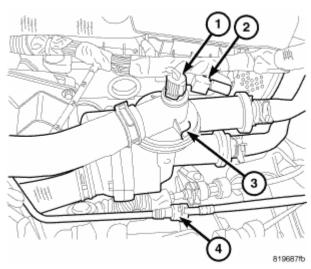

Fig. 48: COOLANT ADAPTER Courtesy of CHRYSLER LLC

- 46. Connect coolant temperature sensor (1).
- 47. Connect capacitor electrical connector (2).
- 48. Install coolant hoses at coolant adapter (3).

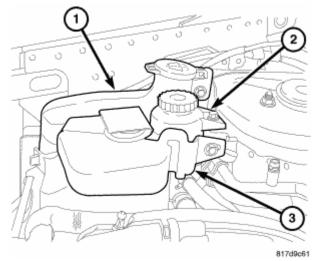

Fig. 49: COOLANT RESERVOIR Courtesy of CHRYSLER LLC

49. Install coolant reservoir (3) and connect hose.

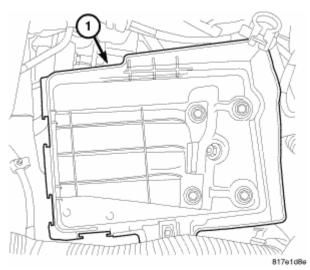

Fig. 50: BATTERY TRAY
Courtesy of CHRYSLER LLC

50. Install battery tray (1).

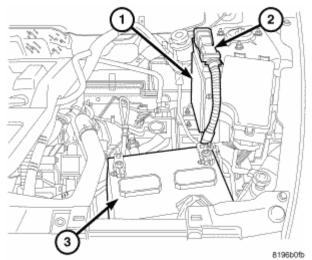

Fig. 51: BATTERY
Courtesy of CHRYSLER LLC

- 51. Install battery (3).
- 52. Connect battery cables.

2007 ENGINE 1.8L - Service Information - Caliber

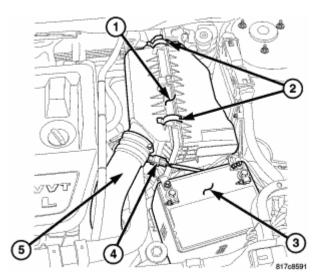

Fig. 52: AIR CLEANER HOUSING Courtesy of CHRYSLER LLC

- 53. Install air cleaner housing (1) and connect inlet air hose.
- 54. Install clean air hose (5).
- 55. Fill with coolant.
- 56. Fill with oil.
- 57. Start engine and check for leaks.

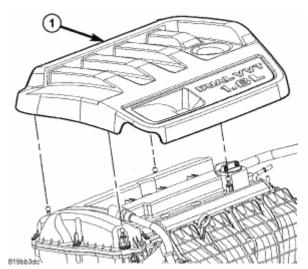

Fig. 53: ENGINE COVER Courtesy of CHRYSLER LLC

- 58. Install engine cover (1).
- 59. Install hood.

SPECIFICATIONS

2007 ENGINE 1.8L - Service Information - Caliber

1.8L ENGINE

GENERAL SPECIFICATIONS

DESCRIPTION	SPECIFICATION	
	Metric	Standard
Type	In-Line OHV, DOHC	
Number of Cylinders	4	4
Firing Order	1-3-4-2	
Compression Ratio	10.5:1	
Max. Variation Between Cylinders	25%	
Displacement	1.8 Liters 110 cu. in.	
Bore	86 mm	3.386 in.
Stroke	77.4 mm	3.047 in.
Compression Pressure	1172-1551 kPa	170-225 psi

CYLINDER BLOCK

DESCRIPTION	SPECIFICATION	
	Metric	Standard
Material	Cast Aluminum

- 2. Push air cleaner housing (1) down while aligning pins into the grommets.
- 3. Connect the throttle body air inlet hose (5) to the air cleaner housing (1).
- 4. Connect intake air temperature sensor connector (4).

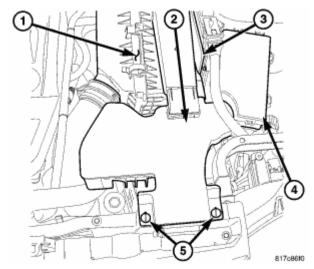

Fig. 85: AIR CLEANER INLET Courtesy of CHRYSLER LLC

5. Install fresh air inlet (2) and lock retainers (5).

CYLINDER HEAD

DESCRIPTION

The cross flow designed, aluminum cylinder head contains dual overhead camshafts with four valves per cylinder. The valves are arranged in two in-line banks. The intake valves face toward the front of the vehicle.

2007 ENGINE 1.8L - Service Information - Caliber

The exhaust valves face the dash panel. The cylinder head incorporates powdered metal valve guides and seats. The cylinder head is sealed to the block using a multi-layer steel head gasket and retaining bolts.

Integral oil galleries provide lubrication passages to the variable camshaft timing phasers, camshafts, and valve mechanisms.

NOTE: Replacement cylinder heads will come complete with valves, seals, springs, retainers, keepers, lash buckets, and camshafts.

DIAGNOSIS AND TESTING

CYLINDER HEAD GASKET

A cylinder head gasket leak can be located between adjacent cylinders, between a cylinder and the adjacent water jacket or from an oil passage to the exterior of the engine.

Possible indications of the cylinder head gasket leaking between adjacent cylinders are:

- Loss of engine power
- Engine misfiring
- Poor fuel economy

Possible indications of the cylinder head gasket leaking between a cylinder and an adjacent water jacket are:

- Engine overheating
- Loss of coolant
- Excessive steam (white smoke) emitting from exhaust
- Coolant foaming

CYLINDER-TO-CYLINDER LEAKAGE TEST

To determine if an engine cylinder head gasket is leaking between adjacent cylinders, follow the procedures in Cylinder Compression Pressure Test. See <u>DIAGNOSIS AND TESTING</u>. An engine cylinder head gasket leaking between adjacent cylinders will result in approximately a 50-70% reduction in compression pressure.

CYLINDER-TO-WATER JACKET LEAKAGE TEST

WARNING: USE EXTREME CAUTION WHEN THE ENGINE IS OPERATING WITH COOLANT PRESSURE CAP REMOVED.

VISUAL TEST METHOD

With the engine cool, remove the coolant pressure cap. Start the engine and allow it to warm up until thermostat opens.

If a large combustion/compression pressure leak exists, bubbles will be visible in the coolant.

domingo, 31 de enero de 2021 12:59:58 a. m.	Page 63	© 2011 Mitchell Repair Information Company, LLC.

2007 ENGINE 1.8L - Service Information - Caliber

COOLING SYSTEM TESTER METHOD

WARNING: WITH COOLING SYSTEM TESTER IN PLACE, PRESSURE WILL BUILD UP FAST. EXCESSIVE PRESSURE BUILT UP, BY CONTINUOUS ENGINE OPERATION, MUST BE RELEASED TO A SAFE PRESSURE POINT. NEVER PERMIT PRESSURE TO EXCEED 138 kPa (20 psi).

Install Cooling System Tester 7700 or equivalent to pressure cap neck. Start the engine and observe the tester's pressure gauge. If gauge pulsates with every power stroke of a cylinder a combustion pressure leak is evident.

CHEMICAL TEST METHOD

Combustion leaks into the cooling system can also be checked by using combustion leak tester C-3685-A or equivalent. Perform test following the procedures supplied with the tool kit.

REMOVAL

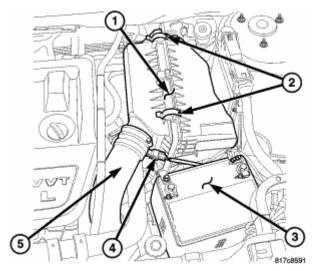

Fig. 86: AIR CLEANER HOUSING Courtesy of CHRYSLER LLC

- 1. Perform fuel system pressure release procedure **before attempting any repairs** . Refer to **STANDARD PROCEDURE** .
- 2. Remove clean air hose and air cleaner housing (1). See **REMOVAL**.
- 3. Disconnect negative cable from battery (3).
- 4. Drain cooling system. Refer to **STANDARD PROCEDURE**.

53. Remove coolant adapter (3) and set aside.

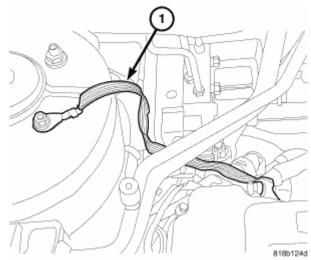

Fig. 104: GROUND STRAP Courtesy of CHRYSLER LLC

- 54. Remove ground strap (1) at right rear of cylinder head.
- 55. Remove exhaust manifold from cylinder head and reposition out of the way. See **REMOVAL**.
- 56. Remove camshafts. See $\underline{\textbf{REMOVAL}}$.

2007 ENGINE 1.8L - Service Information - Caliber

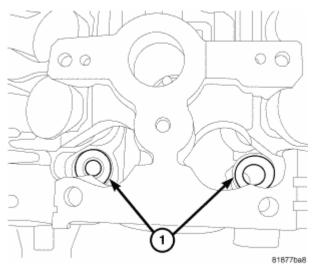

Fig. 105: FRONT HEAD BOLT WASHERS Courtesy of CHRYSLER LLC

NOTE: All of the cylinder head bolts have captured washersEXCEPT the front two (1).

- 57. Remove cylinder head bolts.
- 58. Remove front cylinder head bolt (1) washers.
- 59. Remove cylinder head from engine block.
- 60. Inspect and clean cylinder head and block sealing surfaces. Refer to Cleaning and Inspection in this section for procedures.

NOTE: Ensure cylinder head bolt holes in the block are clean, dry (free of residual oil or coolant), and threads are not damaged.

CLEANING

To ensure engine gasket sealing, proper surface preparation must be performed, especially with the use of aluminum engine components and multi-layer steel cylinder head gaskets.

NOTE: Multi-Layer Steel (MLS) head gaskets require a scratch free sealing surface.

Remove all gasket material from cylinder head and block. Refer to **ENGINE GASKET SURFACE PREPARATION**. Be careful not to gouge or scratch the aluminum head sealing surface.

Clean all engine oil passages.

INSPECTION

NOTE: Replacement cylinder heads will come complete with valves, seals, springs, retainers, keepers, lash buckets, and camshafts.

 - 2 MIDDLE
 - 3 BOTTOM
 - 4 CUT AWAY VIEW OF VALVE GUIDE

MEASUREMENT LOCATIONS

- 2. Inspect camshaft bearing journals for scoring.
- 3. Remove carbon and varnish deposits from inside of valve guides with a reliable guide cleaner.
- 4. Using a small hole gauge and a micrometer, measure valve guides in 3 places top (1), middle (2), and bottom (3). See **Fig. 107**. See **SPECIFICATIONS**. Replace guides if they are not within specification.

9109-98

Fig. 107: Measuring Valve Guide For Wear Courtesy of CHRYSLER LLC

- 5. Check valve guide height.
- 6. Prior to installing cylinder head, the cylinder block should be checked for flatness. See **INSPECTION**.

INSTALLATION

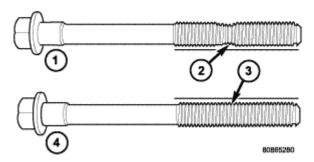

Fig. 108: Checking Bolts for Stretching (Necking)
Courtesy of CHRYSLER LLC

NOTE: Ensure cylinder head bolt holes in the block are clean, dry (free of residual oil

or coolant), and threads are not damaged.

NOTE: The Cylinder head bolts should be examined BEFORE reuse. If the threads are

necked down, the bolts should be replaced.

Necking can be checked by holding a scale or straight edge against the threads. If all the threads do not contact the scale (2), the bolt should be replaced.

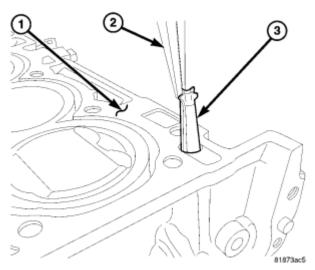

Fig. 109: VVT FILTER
Courtesy of CHRYSLER LLC

CAUTION: Always replace the variable valve timing filter screen (3) when servicing the head gasket or engine damage could result.

1. Replace the variable valve timing filter screen (3).

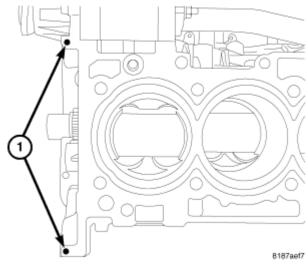

Fig. 110: CYLINDER HEAD RTV Courtesy of CHRYSLER LLC

2. Place two pea size dots of Mopar® engine sealant RTV (1) on cylinder block as shown.

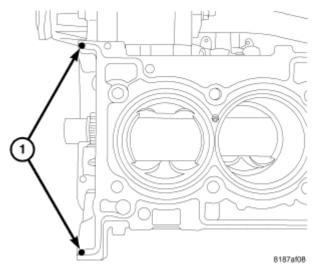

Fig. 111: CYLINDER HEAD GASKET RTV Courtesy of CHRYSLER LLC

- 3. Position the new cylinder head gasket on engine block with the part number facing up. Ensure gasket is seated over the locating dowels in block.
- 4. Place two pea size dots of Mopar® engine sealant RTV (1) on cylinder head gasket as shown.

NOTE: The head must be installed within 15 minutes before the RTV skins.

2007 ENGINE 1.8L - Service Information - Caliber

5. Position cylinder head onto engine block.

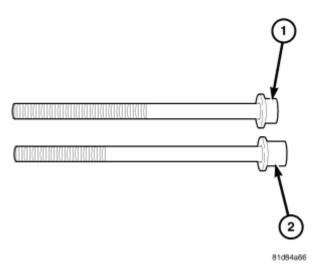

Fig. 112: CYLINDER HEAD BOLT IDENTIFICATION Courtesy of CHRYSLER LLC

CAUTION: This engine was built with 2 different style cylinder head bolts. Each style bolt requires a different torque value. The bolts can be identified by the short bolt head (1) and the long bolt head (2).

6. Identify whether your engine has the short head design (1) or the long head design (2).

8182ebe6

Fig. 113: WASHER
Courtesy of CHRYSLER LLC

NOTE: The front two cylinder head bolts do not have captured washers. The washers must be installed with the bevel up towards the bolt head.

2007 ENGINE 1.8L - Service Information - Caliber

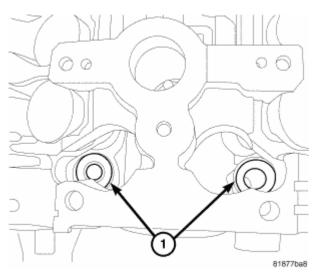

Fig. 114: FRONT HEAD BOLT WASHERS Courtesy of CHRYSLER LLC

7. Install washers (1) for the front two cylinder head bolts.

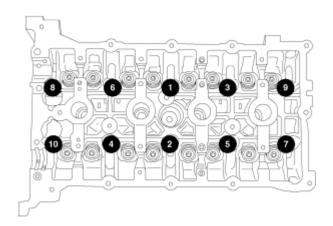

Fig. 115: CYLINDER HEAD TORQUE SEQUENCE Courtesy of CHRYSLER LLC

- 8. Before installing the bolts, the threads should be lightly coated with engine oil.
- 9. Install the cylinder head bolts and torque in the sequence shown.

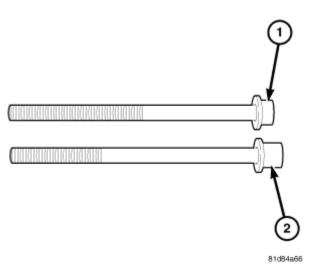

Fig. 116: CYLINDER HEAD BOLT IDENTIFICATION Courtesy of CHRYSLER LLC

10. If your bolt has the short head (1), use the following torque specifications:

First: All to 30 N.m (25 ft. lbs.) Second: All to 61 N.m (45 ft. lbs.) Third: All to 61 N.m (45 ft. lbs.) Fourth: All an additional 90°

CAUTION: Do not use a torque wrench for the Fourth step.

11. If your bolt has the long head (2), use the following torque specifications:

First: All to 30 N.m (25 ft. lbs.) Second: All to 73 N.m (54 ft. lbs.) Third: All to 73 N.m (54 ft. lbs.) Fourth: All an additional 90°

CAUTION: Do not use a torque wrench for the Fourth step.

- 12. Clean excess RTV from timing chain cover sealing surface.
- 13. Install camshafts. See **INSTALLATION**.

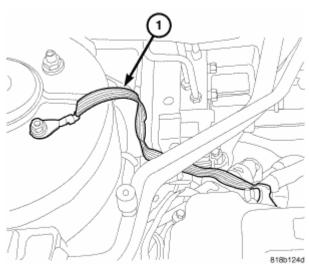

Fig. 117: GROUND STRAP Courtesy of CHRYSLER LLC

- 14. Install cylinder head cover. See **INSTALLATION**.
- 15. Install maniverter/exhaust manifold to cylinder head. Torque fasteners to 34 N.m (25 lbs. ft.).
- 16. Install heat shields. Tighten fasteners to 9 N.m (80 lbs.in.).
- 17. Install oxygen sensor in maniverter.
- 18. Install ground strap (1) at right rear of cylinder head.

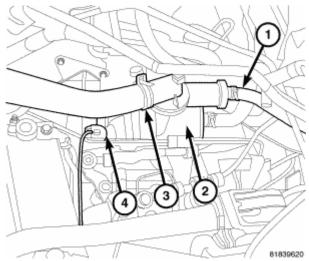

Fig. 118: SECONDARY THERMOSTAT Courtesy of CHRYSLER LLC

- 19. Install coolant (2).
- 20. Install intake manifold.
- 21. Install intake manifold bolts and tighten to 24 N.m (18 ft.lbs.).

27. Install intake manifold and tighten bolts to 25 N.m (220 in. lbs.). See **INSTALLATION**.

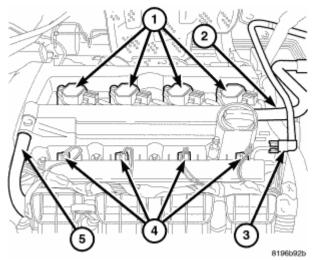

Fig. 122: COIL CONNECTOR Courtesy of CHRYSLER LLC

- 28. Connect cam sensor wiring connector.
- 29. Install spark plugs and tighten to 27 N.m (20 ft.lbs.).
- 30. Install ignition coils (1) and tighten to 8 N.m (70 in.lbs.).

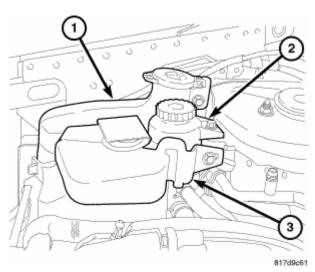

Fig. 123: COOLANT RESERVOIR Courtesy of CHRYSLER LLC

- 31. Install power steering pump reservoir (2).
- 32. Install windshield washer reservoir (1).
- 33. Install coolant recovery reservoir (3)
- 34. Install exhaust pipe to manifold. Torque fasteners to 28 N.m (20 ft. lbs.).
- 35. Install accessory drive belts. Refer to **INSTALLATION**.
- 36. Connect engine coolant temperature sensor connector.

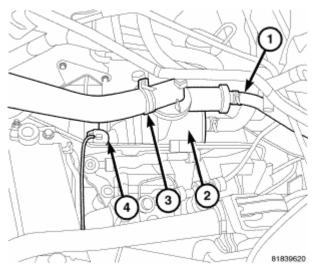

Fig. 124: SECONDARY THERMOSTAT Courtesy of CHRYSLER LLC

- 37. Connect upper radiator hose (3) to coolant adapter (2). Connect heater hoses (1) to thermostat housing.
- 38. Install heater tube support bracket to cylinder head.
- 39. Install fastener attaching dipstick tube to lower intake manifold.
- 40. Connect fuel supply line quick-connect at the fuel rail assembly. Refer to **STANDARD PROCEDURE**.

2007 ENGINE 1.8L - Service Information - Caliber

41. Fill cooling system. Refer to **STANDARD PROCEDURE**.

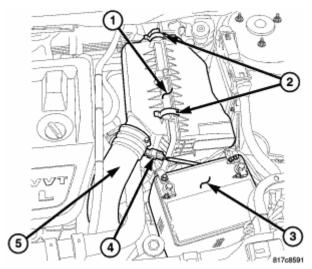

Fig. 125: AIR CLEANER HOUSING Courtesy of CHRYSLER LLC

- 42. Connect negative cable to battery (3).
- 43. Install clean air hose (5) and air cleaner housing (1). See **INSTALLATION**.
- 44. Install new oil filter and fill engine with oil.
- 45. Start engine and check for leaks.

CAMSHAFT(S)

DESCRIPTION

Both camshafts have five bearing journal surfaces and two cam lobes per cylinder. The two front journals are larger to allow for feeding oil to the variable valve timing (VVT) camshaft phasers. Flanges on the third smaller journal control camshaft end play. At the rear of each camshaft is an integral cam sensor target.

CAMSHAFT BEARING CAPS

The front cam bearing cap spans both camshafts, and includes dowels for precise alignment. The front exhaust journal has a select fit bearing insert. This bearing is required to seal the oil passage to the camshaft phaser, because a portion of the lower bearing saddle is machined away for head bolt access. The select fit is required to minimize bearing clearance and oil leakage. An exhaust bearing grade (1,2,or 3) is stamped into the front bearing cap adjacent to the exhaust cam journal. The bearings are also marked with the corresponding grade markings. If the bearing is replaced, the same grade must be used. Due to unique purpose of this bearing, it may appear to have uneven wear patterns. Unless the wear is excessive, greater than 1 mm (0.0394 in.), it is no cause for concern.

The front intake journal has a full lower bearing saddle, and therefore, no bearing insert is required.

All small bearing caps have a formed in arrow to assist in assembly. All small bearing cap arrows must point

2007 ENGINE 1.8L - Service Information - Caliber

towards the center of the cylinder head. The small bearing caps are marked for position during the manufacturing process, and must be reinstalled in their original position.

The #1 cap includes a passage to direct oil from the cylinder head oil gallery to the #1 small bearing journal. Through the #2 journal oil is fed into the camshaft as well. The hollow camshaft then distributes oil to the remainder of the small journals.

The #3 small cap is machined at the front and rear face to control camshaft end-play. This cap has dowels for precise alignment.

OPERATION

The camshaft is driven by the crankshaft via drive sprockets and a chain. The camshaft has precisely machined lobes to provide accurate valve timing and duration.

STANDARD PROCEDURE

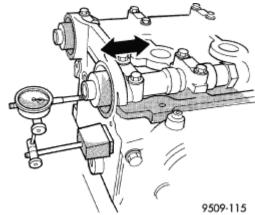

Fig. 126: Checking Camshaft End Play Courtesy of CHRYSLER LLC

- 1. Using a suitable tool, move camshaft as far rearward as it will go.
- 2. Zero dial indicator. See Fig. 126.
- 3. Move camshaft as far forward as it will go.
- 4. Record reading on dial indicator. For end play specification, see **SPECIFICATIONS**.
- 5. If end play is excessive, check cylinder head and camshaft for wear; replace as necessary.

REMOVAL

2007 ENGINE 1.8L - Service Information - Caliber

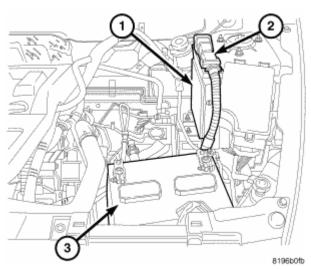

Fig. 127: BATTERY Courtesy of CHRYSLER LLC

- 1. Remove engine cover by pulling upward.
- 2. Disconnect negative cable from battery (3).

- 3. Disconnect coil electrical connectors (1).
- 4. Remove cylinder head cover. See <u>**REMOVAL**</u>.

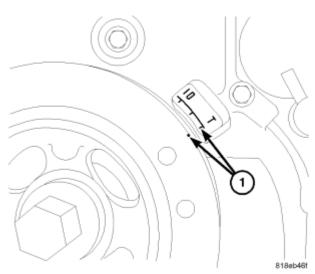

Fig. 129: TDC Courtesy of CHRYSLER LLC

- 5. Raise vehicle.
- 6. Remove right splash shield.
- 7. Rotate engine to TDC (1).

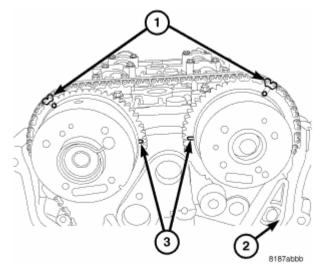

Fig. 130: TIMING CHAIN TIMING MARKS
Courtesy of CHRYSLER LLC

- 8. Make sure camshaft timing marks (3) are aligned.
- 9. Mark the chain link corresponding to timing marks (1) with a paint marker.

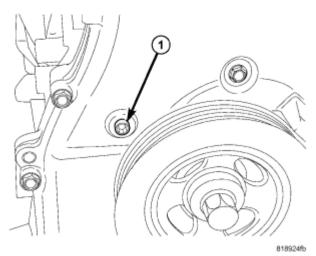

Fig. 131: TENSIONER ACCESS PLUG Courtesy of CHRYSLER LLC

10. Remove timing tensioner plug (1) from front cover.

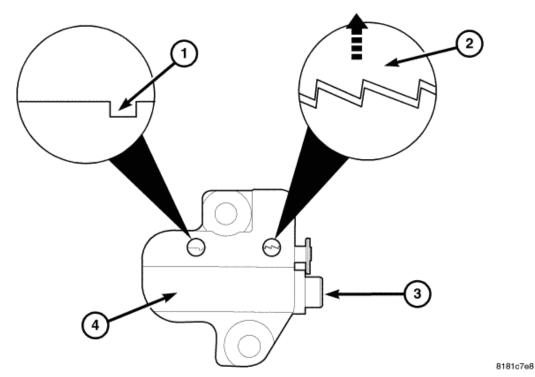

Fig. 132: TENSIONER RESET Courtesy of CHRYSLER LLC

11. Insert small Allen wrench through timing tensioner plug hole and lift ratchet (2) upward to release the tensioner and push Allen wrench inward. Leave the Allen wrench installed during the remainder of this procedure.

2007 ENGINE 1.8L - Service Information - Caliber

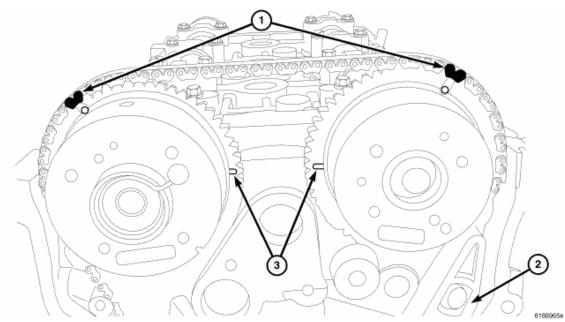

Fig. 133: TIMING CHAIN TIMING MARKS Courtesy of CHRYSLER LLC

- 12. Verify that camshaft timing marks (3) are facing each other as shown.
- 13. Mark the camshaft sprocket timing marks and the corresponding chain links (1) with a paint marker.

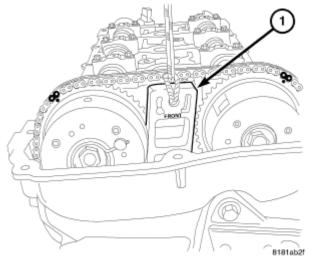

Fig. 134: WEDGE TOOL 9701 Courtesy of CHRYSLER LLC

14. Insert wedge 9701 (1) between camshaft phasers.

2007 ENGINE 1.8L - Service Information - Caliber

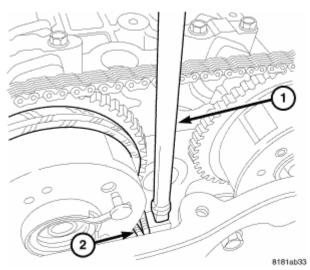

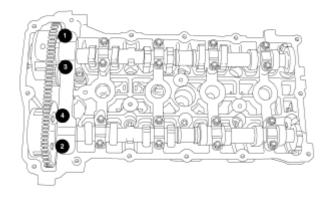

Fig. 135: SEATING WEDGE TOOL 9701 Courtesy of CHRYSLER LLC

15. Lightly tap Wedge 9701(2) into place until it will no longer sink down.

81818e7a

Fig. 136: FRONT CAM CAP REMOVAL SEQUENCE Courtesy of CHRYSLER LLC

- 16. Remove the front camshaft bearing cap.
- 17. Slowly remove the remaining intake and exhaust camshaft bearing cap bolts one turn at a time.

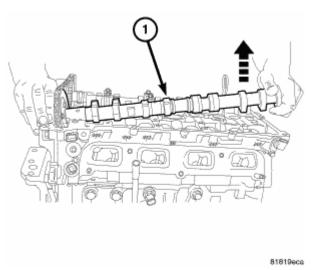

Fig. 137: RAISE INTAKE CAM Courtesy of CHRYSLER LLC

18. Remove intake camshaft (1) by lifting the rear of the camshaft upward.

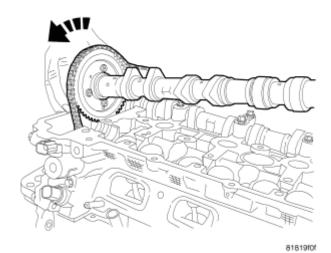

Fig. 138: ROLL CAMSHAFT Courtesy of CHRYSLER LLC

19. Rotate the camshaft while lifting out of the front bearing cradle.

2007 ENGINE 1.8L - Service Information - Caliber

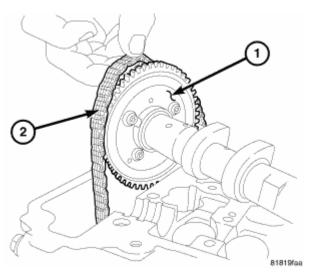

Fig. 139: CHAIN REMOVAL Courtesy of CHRYSLER LLC

- 20. Lift the timing chain (2) off the sprocket (1).
- 21. Remove exhaust camshaft.
- 22. Secure timing chain with wire so that it does fall into the timing chain cover.

CLEANING

Clean camshafts with a suitable solvent.

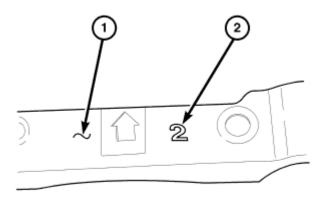

INSPECTION

- 1. Inspect camshaft bearing journals for damage. If journals are damaged, check the cylinder head for damage. Also check cylinder head oil holes for clogging.
- 2. Check the cam lobe and bearing surfaces for abnormal wear and damage. Replace camshaft if defective.

NOTE: If camshaft is replaced due to lobe wear or damage, always replace the lash buckets.

INSTALLATION

2007 ENGINE 1.8L - Service Information - Caliber

81872c46

Fig. 140: CAM CAP BEARING IDENTIFICATION Courtesy of CHRYSLER LLC

1. The cam cap (1) is numbered (2) either one, two, or three, this corresponds to the select fit bearing to use.

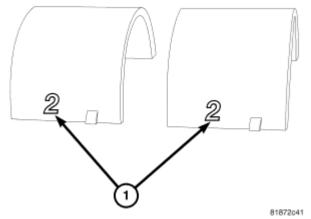

Fig. 141: CAM BEARING IDENTIFICATION Courtesy of CHRYSLER LLC

- 2. Install the corresponding select fit bearing that will also be numbered (1) one, two, or three.
- 3. Oil all of the camshaft journals with clean engine oil.
- 4. Install exhaust camshaft and position on bearing journals in the cylinder head.

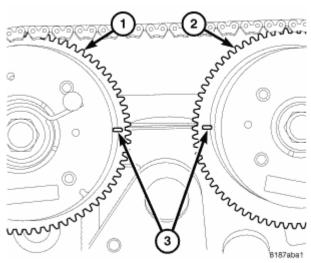

Fig. 142: CAMSHAFT TIMING Courtesy of CHRYSLER LLC

5. Align exhaust cam (1) timing mark (3) so it is parallel to the cylinder head as shown.

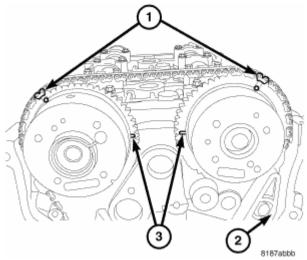

Fig. 143: TIMING CHAIN TIMING MARKS
Courtesy of CHRYSLER LLC

6. Install timing chain onto exhaust cam sprocket making sure that the timing marks on the sprockets and painted or marked links (1) on the timing chain are aligned.

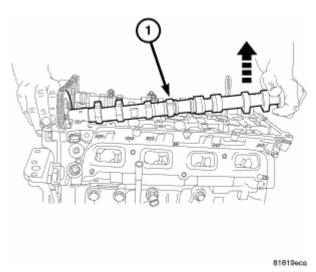

Fig. 144: RAISE INTAKE CAM Courtesy of CHRYSLER LLC

7. Install intake camshaft (1) by raising the rear of the camshaft upward and roll the sprocket into the chain.

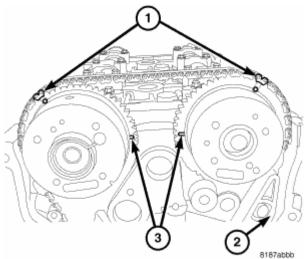

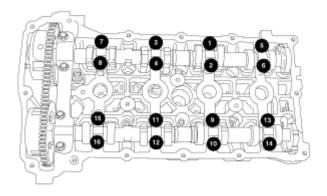

Fig. 145: TIMING CHAIN TIMING MARKS
Courtesy of CHRYSLER LLC

- 8. Align the timing marks (1) on the intake cam sprocket with the mark in the chain.
- 9. Position the intake camshaft into the bearing journals in the cylinder head.
- 10. Verify that the timing marks (1) are aligned on both camshafts and chain, and that the timing marks (3) are parallel with the cylinder head.

CAUTION: Install the front intake and exhaust camshaft bearing cap last. Ensure that the dowels are seated and follow torque sequence or damage to engine could result.

2007 ENGINE 1.8L - Service Information - Caliber

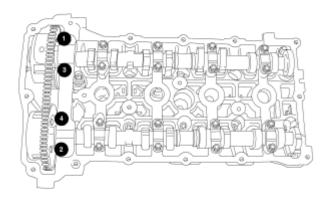

NOTE: If the front camshaft bearing cap is broken, the cylinder head MUST be replaced.

81818e70

Fig. 146: TORQUE SEQUENCE Courtesy of CHRYSLER LLC

11. Install intake and exhaust camshaft bearing caps and slowly torque bolts to 9.5 N.m (85 in. lbs.) in the sequence shown.

81818674

Fig. 147: Front Cam Cap Torque Sequence Courtesy of CHRYSLER LLC

NOTE: Verify that the exhaust bearing shells are correctly installed, and the dowels are seated in the head prior to torquing bolts.

12. Install the front intake and exhaust bearing cap and torque bolts to 25 N.m (18 ft. lbs.) in the sequence shown.

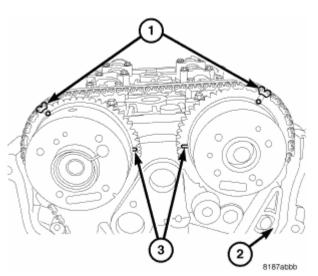

Fig. 148: TIMING CHAIN TIMING MARKS Courtesy of CHRYSLER LLC

13. Verify that all timing marks (1,3) are aligned.

REMOVAL

VALVE TAPPETS

2007 ENGINE 1.8L - Service Information - Caliber

8182e337

Fig. 162: Cylinder Head Cover Bolt Removal Sequence Courtesy of CHRYSLER LLC

NOTE: This procedure is for in-vehicle service with camshafts installed.

NOTE: Camshaft tappets must be replaced if cylinder head or camshafts are replaced.

- 1. Remove cylinder head cover. See **REMOVAL**.
- 2. Remove camshafts. See **REMOVAL**.

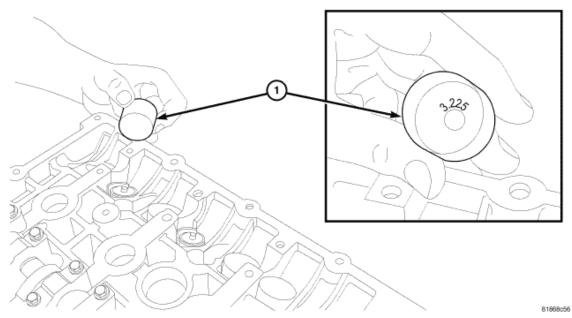

Fig. 163: Camshaft Tappet Courtesy of CHRYSLER LLC

3. Remove camshaft tappets (1).

2007 ENGINE 1.8L - Service Information - Caliber

- 4. Repeat removal procedure for each camshaft tappet (1).
- 5. If reusing, mark each camshaft bucket for reassembly in original position.

INSTALLATION

HYDRAULIC LASH ADJUSTERS

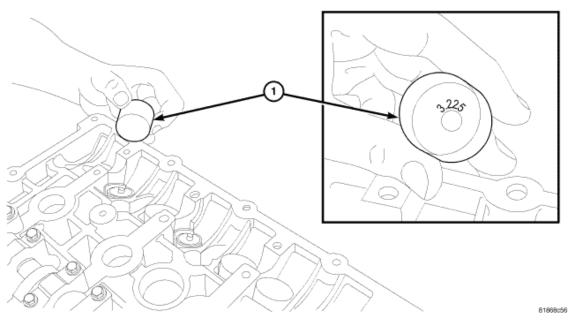

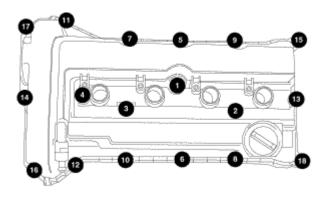

Fig. 164: Camshaft Tappet Courtesy of CHRYSLER LLC

NOTE: If reinstalling original tappets they must go back in their original location or engine damage could result.

- 1. Apply a light coat of clean engine oil to camshafts tappets (1) prior to assembly.
- 2. Install camshaft tappets (1) into cylinder head.
- 3. Repeat installation procedure for each camshaft tappet.
- 4. Install camshafts. See **INSTALLATION**.

NOTE: If installing new tappets, the valve lash procedure must be performed.

2007 ENGINE 1.8L - Service Information - Caliber

5. Install cylinder head cover. See **INSTALLATION**.

VALVES & SEATS-INTAKE/EXHAUST

DESCRIPTION

VALVE AND VALVE SPRING

The valves are made of heat resistant steel. They have nitrided stems to prevent scuffing. Viton rubber valve stem seals are integral with the spring seats. The valves have a single bead lock keepers to retain the springs.

OPERATION

VALVE AND VALVE SPRING

The four valves per cylinder (two intake and two exhaust) are opened by using direct acting buckets which are actuated by the camshaft.

CLEANING

VALVE AND VALVE SPRING

1. Clean all valves thoroughly and discard burned, warped and cracked valves.

CAUTION: Due to the small margin on the valve, grinding is not recommended.

SPRINGS & SEALS-VALVE

REMOVAL

domingo, 31 de enero de 2021 12:59:59 a. m.	Page 108	© 2011 Mitchell Repair Information Company, LLC.

2007 ENGINE 1.8L - Service Information - Caliber

VALVE AND VALVE SPRING

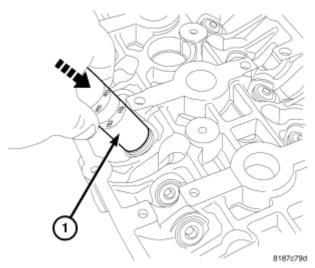

Fig. 166: Valve Keeper Tool Courtesy of CHRYSLER LLC

1. With cylinder head removed from cylinder block, place a ball of rags in the combustion chamber.

CAUTION: Care must be taken not to damage the tappet bore or engine damage may result.

- 2. Mark valve tappet location for assembly.
- 3. Remove valve tappets.
- 4. Using metric valve keeper tool such as Snap-on® GA317 (or equivalent) remover (1), remove valve keepers with a downward push.
- 5. Remove retainer and springs.
- 6. Before removing valves, **remove any burrs from valve stem lock grooves to prevent damage to the valve guides.** Identify valves, locks and retainers to insure installation in original location.
- 7. Inspect the valves. See **INSPECTION**.

VALVE SPRINGS AND VALVE SEALS IN VEHICLE

2007 ENGINE 1.8L - Service Information - Caliber

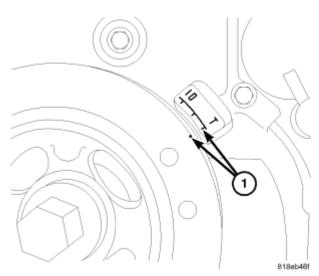

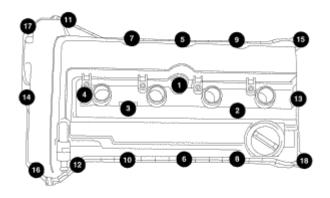

Fig. 167: TDC Mark
Courtesy of CHRYSLER LLC

1. Rotate crankshaft until piston is at TDC on compression.

8182e337

Fig. 168: Cylinder Head Cover Bolt Tightening Sequence Courtesy of CHRYSLER LLC

- 2. Remove cylinder head cover. See <u>**REMOVAL**</u>.
- 3. Remove camshafts. See **REMOVAL**.
- 4. Mark valve tappet location for assembly.
- 5. Remove valve tappets.
- 6. With air hose attached to adapter tool installed in spark plug hole, apply 90-120 psi air pressure.

CAUTION: Care must be taken not to damage the tappet bore or engine damage may result.

2007 ENGINE 1.8L - Service Information - Caliber

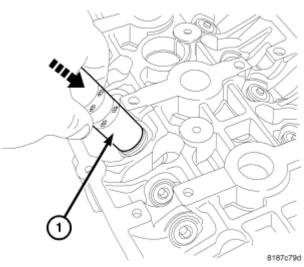

Fig. 169: Valve Keeper Tool Courtesy of CHRYSLER LLC

- 7. Using metric valve keeper tool (1) such as Snap-on® GA317 (or equivalent), and remove valve spring keepers and retainer.
- 8. Remove valve spring(s).
- 9. Remove valve stem seal(s) by a using valve stem seal tool.

INSPECTION

VALVE AND VALVE SPRING

1. Whenever valves have been removed for inspection, reconditioning or replacement, valve springs should be tested for correct load. Discard the springs that do not meet specifications. The following specifications apply to both intake and exhaust valves springs:

Valve closed nominal load - 179.5 N \pm 9 N @ 35.0 mm (40.35 lbs. \pm 2 lbs. @ 1.38 in.).

Valve open nominal load - 364.8 N \pm 17 N @ 29.25 mm (82 lbs. \pm 3.8 lbs. @ 1.152 in.).

2. Inspect each valve spring for squareness with a steel square and surface plate, test springs from both ends. If the spring is more than 1.5 mm (1/16 inch) out of square, install a new spring.

INSTALLATION

VALVE SPRINGS AND VALVE SEALS IN VEHICLE

CAUTION: Care must be taken not to damage the tappet bore or engine damage may result.

2007 ENGINE 1.8L - Service Information - Caliber

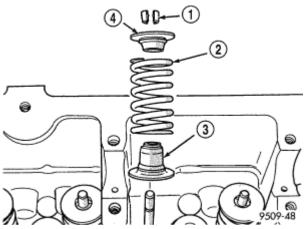

Fig. 170: Valve Seal/Valve Spring Seat Assembly Courtesy of CHRYSLER LLC

- 1. Install valve seal/valve spring seat (3) assembly. Push the assembly down with appropriate size socket to seat it onto the valve guide.
- 2. Install valve spring (2) and retainer (4) with keepers (1).

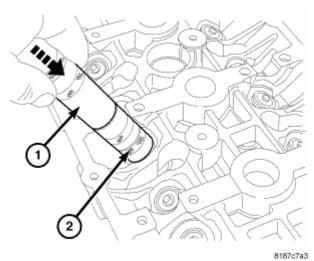

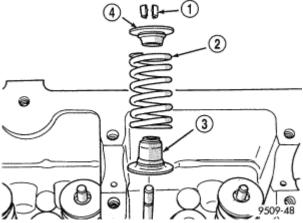

Fig. 171: Valve Keeper Tool Courtesy of CHRYSLER LLC

- 3. Place the valve keepers in the retainer. Using metric valve keeper tool such as Snap-on® GA317 (or equivalent) installer (2) and remover (1) as a handle, install valve keepers with a downward push.
- 4. Remove air hose and install spark plugs.
- 5. Install valve tappets.
- 6. Install camshafts. See **INSTALLATION**.
- 7. Install cylinder head cover. See **INSTALLATION**.

VALVE AND VALVE SPRING

CAUTION: Care must be taken not to damage the tappet bore or engine damage may result.

<u>Fig. 172: Valve Seal/Valve Spring Seat Assembly</u> Courtesy of CHRYSLER LLC

- 1. Coat valve stems with clean engine oil and insert in cylinder head.
- 2. Install new valve stem seals (3) on all valves using an appropriate sized socket to seat the seal/spring seat. The valve stem seals should be pushed firmly and squarely over valve guide.
- 3. Install valve springs (2).
- 4. Install keepers in retainer and place on valve spring.

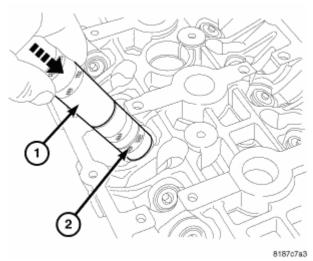

Fig. 173: Valve Keeper Tool Courtesy of CHRYSLER LLC

5. Using metric valve keeper tool such as Snap-on® GA317 (or equivalent) installer (2) and remover (1) as a handle, push downward to install keepers.

2007 ENGINE 1.8L - Service Information - Caliber

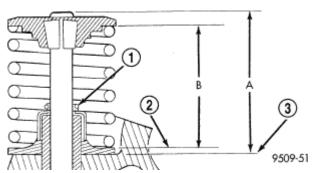

Fig. 174: Checking Valve Spring Installed Height B Courtesy of CHRYSLER LLC

- 6. Check the valve spring installed height B after refacing the valve and seat. Make sure measurements are taken from top of spring seat to the bottom surface of spring retainer. If height is greater than 38.75 mm (1.525 in.), install a 0.762 mm (0.030 in.) spacer under the valve spring seat to bring spring height back within specification.
- 7. Install valve tappets.

ASSEMBLY-VARIABLE VALVE TIMING

DESCRIPTION

The world engine is equipped with Variable Valve Timing (VVT). This system advances and/or retards intake and/or exhaust camshaft timing to improve engine performance, mid-range torque, idle quality, fuel economy, and reduce emissions. The camshaft sprockets are integrated with the VVT assemblies and are serviced as an assembly. VVT assemblies are sometimes referred to as camshaft phasers.

OPERATION

The Variable Valve Timing (VVT) assemblies are actuated with engine oil pressure. The oil flow to the VVT assemblies are controlled by two Oil Control Valves (OCV). There is an OCV and Camshaft Position Sensor (CMP) for each camshaft. The OCV's consist of a Pulse Width Modulated (PWM) solenoid and a spool valve. The PCM actuates the OCV to control oil flow through the spool valve into the VVT assemblies. The VVT assembly consists of a rotor, stator, and sprocket. The stator is connected to the timing chain through the sprocket. The rotor is connected to the camshaft. Oil flow in to the VVT assembly rotates the rotor with respect to the stator, thus rotating the camshaft with respect to the timing chain. Thus, the VVT assemblies change valve timing by changing the relationship between the camshaft and the timing chain. An infinitely variable valve timing position can be achieved within the limits of the hardware. The CMP monitors the position of the camshaft with respect to the crankshaft and provides feedback to the PCM.

REMOVAL

2007 ENGINE 1.8L - Service Information - Caliber

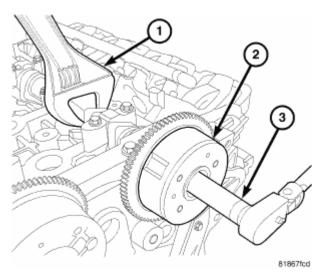

Fig. 175: Cam Phasor Installation Courtesy of CHRYSLER LLC

NOTE: Use flats on camshaft to camshaft from rotating.

- 1. Remove camshafts. See **REMOVAL**.
- 2. Remove camshaft phaser (2) retaining bolt while holding the camshaft in place with a wrench (1).
- 3. Remove phaser (2) assembly from camshaft.

INSTALLATION

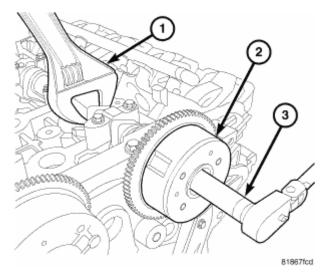

Fig. 176: Cam Phaser Installation Courtesy of CHRYSLER LLC

CAUTION: Do not use an impact wrench to tighten camshaft sprocket bolts. Damage to the camshaft-to-sprocket locating dowel pin and camshaft phaser may occur.

2007 ENGINE 1.8L - Service Information - Caliber

1. Install phaser (2) assembly on camshaft.

NOTE: Make sure the dowel is seated in the in the dowel hole and not in an oil

feed hole. The dowel hole is larger than the 4 oil feed holes.

NOTE: Use flats on camshafts to prevent camshaft from rotating.

2. Install phaser retaining bolt and torque while holding camshaft in place with a wrench (1).

3. Install camshafts. See INSTALLATION.

ENGINE BLOCK

DESCRIPTION

CYLINDER BLOCK AND LADDER FRAME

The die cast aluminum cylinder block is a two-piece assembly, consisting of the cylinder block and ladder frame. The block is an open deck design with cast in place cast iron cylinder liners. The cast iron cylinder liners are recessed below the aluminum deck surface. The ladder frame bolts to the cylinder block and does not incorporate the main bearing caps. This design offers a much stronger lower end and increased cylinder block and transaxle rigidity. The rear oil seal retainer is integral with the block and ladder frame. The ladder frame and block are serviced as an assembly.

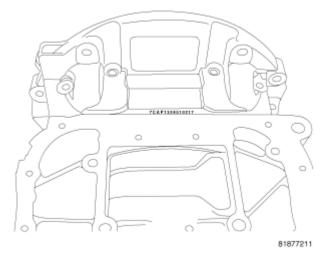

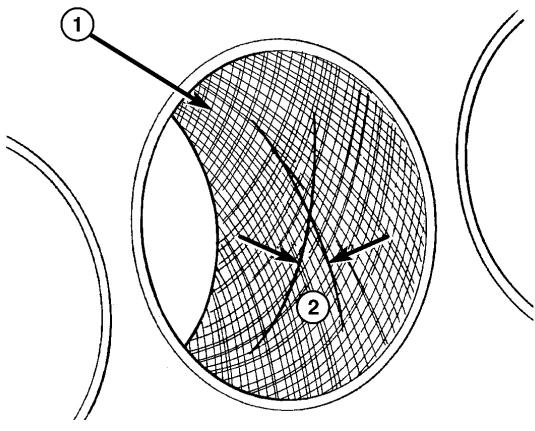

Fig. 177: Serial Number Courtesy of CHRYSLER LLC

The engine serial number is located on the bottom of the ladder frame just behind the oil pan. The date can be seen with the oil pan in place.

STANDARD PROCEDURE

CYLINDER BORE HONING

808a6311

Fig. 178: Cylinder Bore Cross-Hatch Pattern Courtesy of CHRYSLER LLC

- 1 CROSS-HATCH PATTERN
- 2 40°-60°
 - 1. Deglazing of the cylinder walls may be done using a quality commercially available flex hone, if the cylinder bore is straight and round. 20-60 strokes depending on the bore condition, will be sufficient to provide a satisfactory surface. Use a light honing oil. **Do not use engine or transmission oil, mineral spirits or kerosene.** Inspect cylinder walls after each 20 strokes.
 - 2. Honing should be done by moving the hone up and down fast enough to get a cross-hatch pattern. When hone marks **intersect** at 30-50 degrees, the cross hatch angle is most satisfactory for proper seating of rings. See **Fig. 178**.
 - 3. A controlled hone motor speed between 200-300 RPM is necessary to obtain the proper cross-hatch angle. The number of up and down strokes per minute can be regulated to get the desired 30-50 degree angle. Faster up and down strokes increase the cross-hatch angle.
 - 4. After honing, it is necessary that the block be cleaned again to remove all traces of abrasive.

CAUTION: Ensure all abrasives are removed from engine parts after honing. It is recommended that a solution of soap and hot water be used with a brush and the parts then thoroughly dried. The bore can be considered clean when it can be wiped clean with a white cloth and cloth remains clean. Oil the bores after cleaning to prevent rusting.

CLEANING

Clean cylinder block thoroughly using a suitable cleaning solvent.

INSPECTION

ENGINE BLOCK

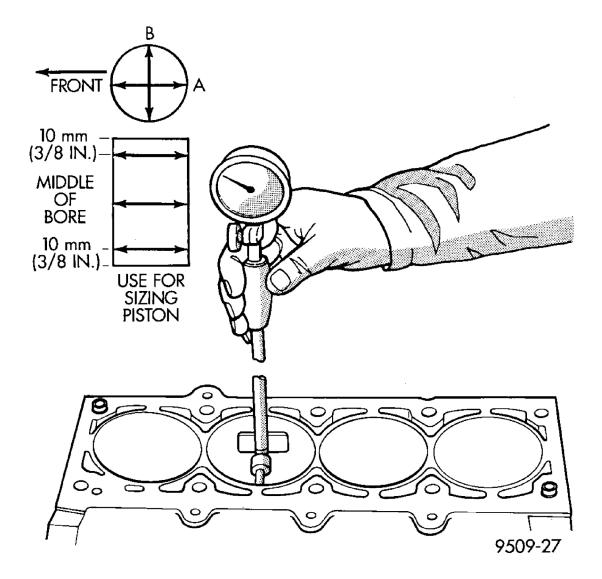

Fig. 179: Checking Cylinder Bore Diameter Courtesy of CHRYSLER LLC

2007 ENGINE 1.8L - Service Information - Caliber

- 1. Clean cylinder block thoroughly and check all core hole plugs for evidence of leaking.
- 2. Examine block and cylinder bores for cracks or fractures.
- 3. Check block deck surfaces for flatness. Deck surface must be within service limit of 0.050 mm (0.002 in.).

CYLINDER BORE

NOTE: The cylinder bores should be measured at normal room temperature, 21°C (70° F).

The cylinder walls should be checked for out-of-round and taper with Tool C119 or equivalent. See <u>Fig. 179</u>. See <u>SPECIFICATIONS</u>. If the cylinder walls are badly scuffed or scored, the cylinder block should be replaced, and new pistons and rings fitted.

Measure the cylinder bore at three levels in directions A and B. See <u>Fig. 179</u>. Top measurement should be 10 mm (3/8 in.) down and bottom measurement should be 10 mm (3/8 in.) up from bottom of bore. See **SPECIFICATIONS**.

CRANKSHAFT

STANDARD PROCEDURE

MEASURING CRANKSHAFT END PLAY

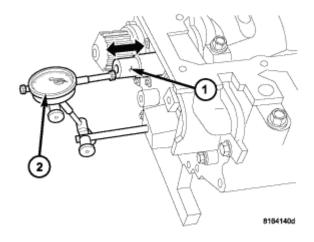

Fig. 180: Checking Crankshaft End Play - Typical Courtesy of CHRYSLER LLC

- 1 Crankshaft
- 2 DIAL INDICATOR
 - 1. Mount a dial indicator (2) to front of engine with the locating probe on nose of crankshaft (1). See <u>Fig.</u> <u>180</u>.

2007 ENGINE 1.8L - Service Information - Caliber

- 2. Move crankshaft all the way to the rear of its travel.
- 3. Zero the dial indicator.
- 4. Move crankshaft all the way to the front and read the dial indicator. See **SPECIFICATIONS** for end play specification.

REMOVAL

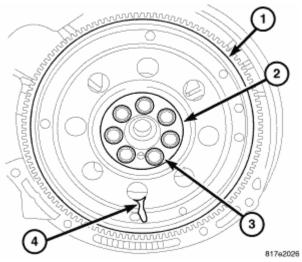

Fig. 181: Flex Plate Courtesy of CHRYSLER LLC

NOTE: Crankshaft can not be removed when engine is in vehicle.

- 1. Remove engine assembly from vehicle. See **<u>REMOVAL</u>**.
- 2. Remove flex plate/flywheel (1).
- 3. Remove crankshaft rear oil seal. See **REMOVAL**.

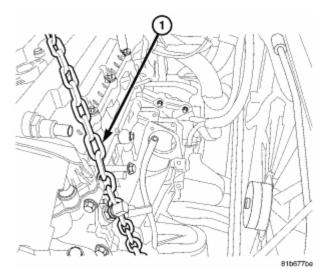

Fig. 182: LIFT CHAIN

Courtesy of CHRYSLER LLC

- 4. Mount engine on a suitable stand.
- 5. Remove engine lift chain (1).

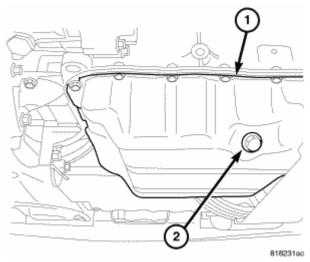

Fig. 183: Oil Drain Plug Courtesy of CHRYSLER LLC

6. Drain engine oil (2).

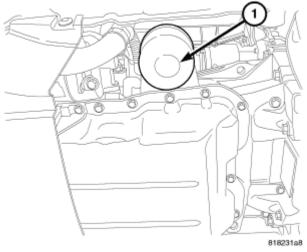

Fig. 184: Oil Filter Courtesy of CHRYSLER LLC

7. Remove oil filter (1).

2007 ENGINE 1.8L - Service Information - Caliber

- 8. Remove crankshaft vibration damper (2). See **REMOVAL**.
- 9. Remove water pump pulley (3).
- 10. Remove engine mount support bracket (1).

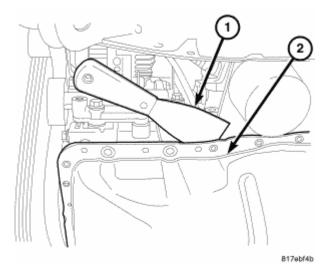

Fig. 186: Oil Pan Removal Courtesy of CHRYSLER LLC

- 11. Remove the oil pan (2). See **REMOVAL**.
- 12. Remove timing chain cover. See **REMOVAL**.
- 13. Remove the timing chain. See **REMOVAL**.
- 14. Remove balance shaft module.

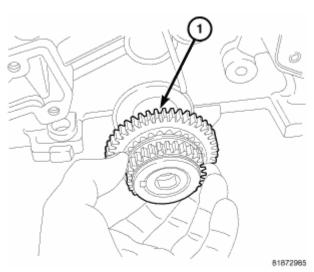

Fig. 187: Crankshaft Sprocket Courtesy of CHRYSLER LLC

15. Remove the crankshaft sprocket (1).

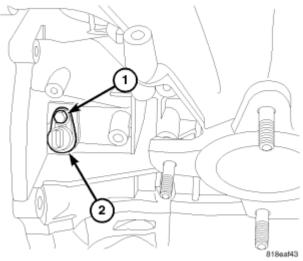

Fig. 188: Crankshaft Position Sensor Courtesy of CHRYSLER LLC

- 16. Remove crankshaft position sensor retaining bolt (1) and remove sensor (2).
- 17. Remove ladder frame. See **REMOVAL**.

2007 ENGINE 1.8L - Service Information - Caliber

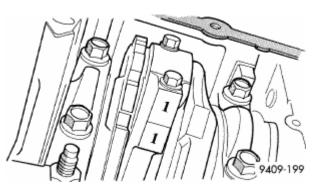

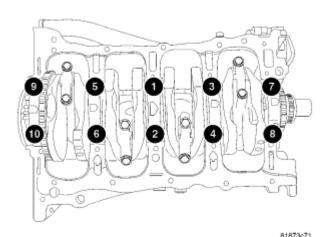

Fig. 189: Identify Connecting Rod to Cylinder-Typical Courtesy of CHRYSLER LLC

NOTE: If piston/connecting rod replacement is necessary, remove cylinder head.

See <u>REMOVAL</u>.

CAUTION: DO NOT use a number stamp or a punch to mark connecting rods. Damage to connecting rod could occur.

- 18. Using a permanent ink or paint marker, identify cylinder number on each connecting rod cap.
- 19. Remove all connecting rod bolts and caps. Care should be taken not to damage the fracture rod and cap surfaces.

<u>Fig. 190: Main Bearing Cap Torque Sequence</u> Courtesy of CHRYSLER LLC

NOTE: Do not reuse connecting rod bolts.

20. Remove main bearing caps.

CAUTION: Use extreme care when handling crankshaft. Tone wheel damage can

2007 ENGINE 1.8L - Service Information - Caliber

occur if crankshaft is mis-handled.

21. Lift out crankshaft from cylinder block. Do not damage the main bearings or journals when removing the crankshaft.

INSPECTION

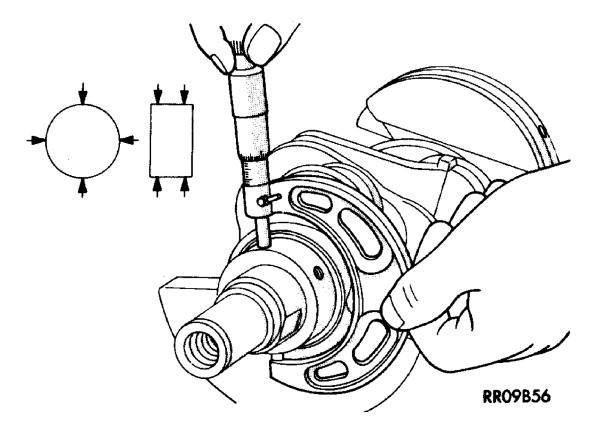

Fig. 191: Crankshaft Journal Measurements - Typical Courtesy of CHRYSLER LLC

The crankshaft main journals should be checked for excessive wear, taper and scoring. Limits of taper on any crankshaft main journals should be held to 0.006 mm (0.00024 in.). Limits of taper on any crankshaft rod journals should be held to 0.005 mm (0.0002 in.). DO NOT nick crank pin or bearing fillets. Limits of out of round on any crankshaft journals should be held to 0.005 mm (0.0002 in). DO NOT nick crank pin or bearing fillets.

INSTALLATION

2007 ENGINE 1.8L - Service Information - Caliber

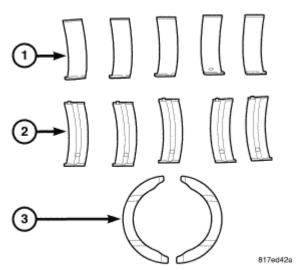

Fig. 192: BEARING IDENTIFICATION
Courtesy of CHRYSLER LLC

The crankshaft is supported in five main bearings. All upper bearing shells (2) in the crankcase have oil grooves and holes. All lower bearing shells (1) are smooth. Crankshaft end play is controlled by a two piece thrust bearing (3) on the number three main bearing journal.

- 1. Clean main bearing cap bolt holes with Mopar® brake parts cleaner or equivalent and blow out with compressed air.
- 2. Install the main bearing upper (2) shells with the lubrication groove and oil hole in the engine block.
- 3. Make certain oil holes in block line up with oil hole in bearings and bearing tabs seat in the block tab slots.

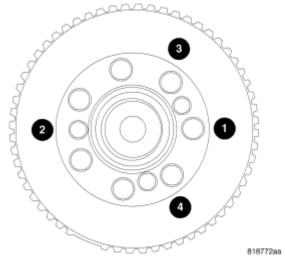

Fig. 193: TARGET WHEEL Courtesy of CHRYSLER LLC

NOTE: If the crankshaft is sent out for machine work, it must be balanced as an assembly with the target ring installed.

2007 ENGINE 1.8L - Service Information - Caliber

4. Clean crankshaft and target ring with MOPAR® Brake Parts cleaner and dry with compressed air to ensure that the crankshaft mating surface and target ring mounting holes are free from oil and lock patch debris.

NOTE: Always use NEW mounting screws whether installing original or new target ring.

- 5. Install **NEW** mounting screws finger tight starting with the #1 location. Make sure engagement occurs with the shoulder of the screws and mounting hole before starting all other screws.
- 6. Tighten all mounting screws to 13 N.m (110 in-lbs) in the sequence shown.

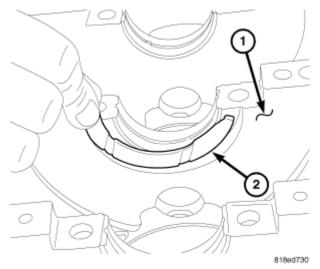

Fig. 194: INSTALLING THRUST BEARING Courtesy of CHRYSLER LLC

NOTE: Lightly apply trans gel to thrust bearings to hold bearings in block.

NOTE: The thrust bearings must be installed the notches facing the crankshaft.

7. Install thrust bearings (2) in block (1).

CAUTION: Do not get oil on the ladder frame mating surface. It will affect the ability of the RTV to seal the ladder frame to cylinder block.

NOTE: Ensure main bearing cap bolt holes in the block are clean, dry (free of residual oil or coolant), and threads are not damaged.

8. Oil the bearings and journals. Install crankshaft in engine block.

2007 ENGINE 1.8L - Service Information - Caliber

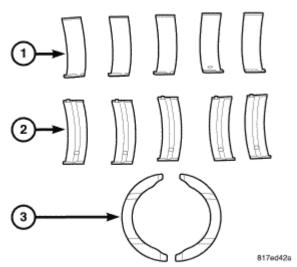

Fig. 195: BEARING IDENTIFICATION Courtesy of CHRYSLER LLC

9. Install lower main bearings (1) into main bearing cap. Make certain the bearing tabs are seated into the bearing cap slots.

NOTE: Main bearing caps are stamped 1 - 5 front to rear. Arrows on the caps must point towards the front of the engine.

- 10. Install main bearing caps to engine block.
- 11. Before installing the bolts the threads should be clean and dry.
- 12. Loosely install main bearing cap bolts.
- 13. To ensure correct thrust bearing alignment, perform the following steps:
 - Step 1: Rotate crankshaft until number 4 piston is at TDC.
 - Step 2: Move crankshaft rearward to limits of travel.
 - Step 3: Then, move crankshaft forward to limits of travel.
 - Step 4: Wedge an appropriate tool between the rear of the cylinder block and the rear crankshaft counterweight. This will hold the crankshaft in its furthest forward position.

CAUTION: There are different sets main bolts supplied with this engine. Each bolt set has a different torque value and engine damage could result if bolts are not torqued correctly. The bolts are not interchangeable.

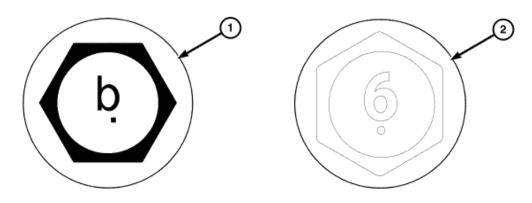

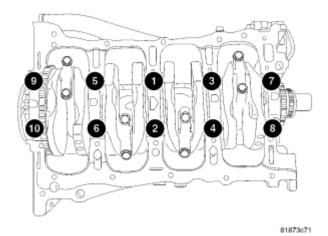

Fig. 196: MAIN BOLT IDENTIFICATION Courtesy of CHRYSLER LLC

14. If your bolt heads look like this (1,2), go to step 15. If your bolt heads do not look like this (1,2), go to step 16.

<u>Fig. 197: MAIN BEARING CAP TORQUE SEQUENCE</u> Courtesy of CHRYSLER LLC

CAUTION: Before tightening bolts, you must identify the bolt head to obtain the correct torque value. Failure to identify the bolts correctly, could result in improperly tightened bolts which could result in engine damage.

15. Tighten bolts using a three step method, in the sequence shown.

Tighten bolts to 15 N.m (11 ft. lbs.)

Tighten bolts to 27 N.m (20 ft. lbs.)

Rotate an additional 45°.

16. Tighten bolts using a three step method, in the sequence shown.

81c9632f

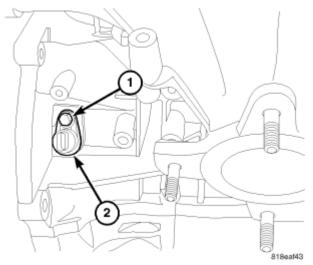

2007 ENGINE 1.8L - Service Information - Caliber

Tighten bolts to 15 N.m (11 ft. lbs.)

Tighten bolts to 45 N.m (33 ft. lbs.)

Rotate an additional 45°.

- 17. Remove wedge tool used to hold crankshaft.
- 18. Check the crankshaft turning torque, it should not exceed 5.6 N.m (50 in. lbs.).
- 19. Check crankshaft end play. See **STANDARD PROCEDURE**.
- 20. Install connecting rod bearings and caps. **Do Not Reuse Connecting Rod Bolts.** Tighten connecting rod bolts to 20 N.m + 90° (15 ft. lbs.) + 90°. See **INSTALLATION**.
- 21. Install the ladder frame assembly. See **INSTALLATION**.
- 22. Install the balance shaft module. See **INSTALLATION**.

<u>Fig. 198: CRANKSHAFT POSITION SENSOR</u> Courtesy of CHRYSLER LLC

- 23. Install crankshaft position sensor (2) and tighten bolt (1).
- 24. Install cylinder head if it was removed. See **INSTALLATION**.

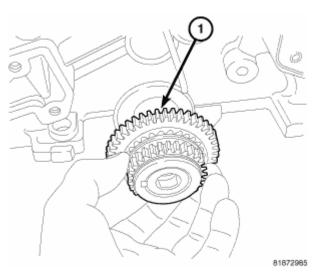

Fig. 199: CRANKSHAFT SPROCKET Courtesy of CHRYSLER LLC

- 25. Install front crankshaft sprocket (1).
- 26. Install the timing chain. See **INSTALLATION**.
- 27. Install the timing chain front cover. See **INSTALLATION**.
- 28. Install the oil pan. See **INSTALLATION**.
- 29. Install rear crankshaft oil seal. See INSTALLATION.
- 30. Install front crankshaft oil seal. See **INSTALLATION**.

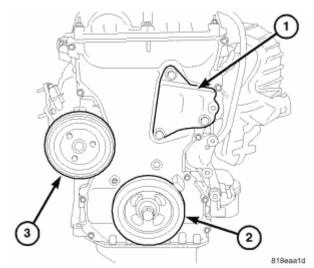

Fig. 200: RIGHT ENGINE MOUNT BRACKET Courtesy of CHRYSLER LLC

- 31. Install engine mount support bracket (1).
- 32. Install crankshaft vibration damper (2). See **INSTALLATION**.
- 33. Install water pump pulley (3).

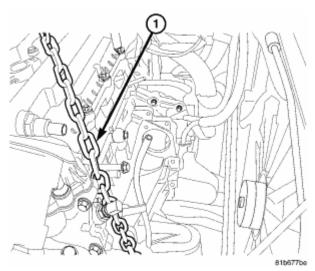

Fig. 201: LIFT CHAIN
Courtesy of CHRYSLER LLC

- 34. Remove engine from repair stand and install engine lift chain (1).
- 35. Install crankshaft rear oil seal. See **INSTALLATION**.
- 36. Install drive plate/flex plate using **new** bolts. Tighten bolts to 95 N.m (70 ft. lbs.).
- 37. Attach transaxle to engine. Tighten bellhousing bolts to 101 N.m (75 ft. lbs.).
- 38. Install the engine assembly. See **INSTALLATION**.

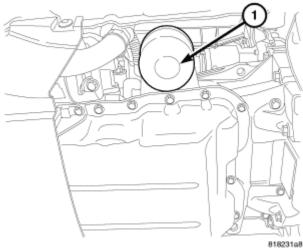

Fig. 202: OIL FILTER
Courtesy of CHRYSLER LLC

- 39. Install new oil filter (1) and fill with oil.
- 40. Fill with coolant. Refer to **STANDARD PROCEDURE**.
- 41. Start engine and check for leaks.
- 42. Install engine cover.

2007 ENGINE 1.8L - Service Information - Caliber

SEAL-CRANKSHAFT OIL FRONT

REMOVAL

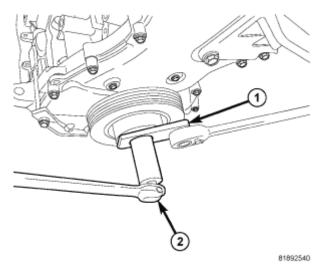

Fig. 203: Damper Removal Courtesy of CHRYSLER LLC

- 1. Remove accessory drive belt.
- 2. Install damper holder 9707 (1) and remove damper retaining bolt.
- 3. Pull damper off crankshaft.

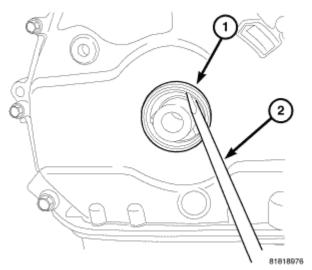

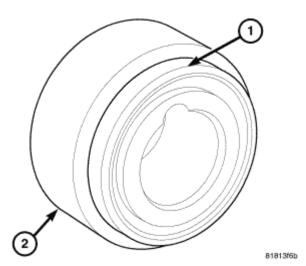

Fig. 204: Front Crankshaft Seal Removal Courtesy of CHRYSLER LLC

4. Remove front crankshaft oil seal (1) by prying out with a screw driver (2). Be careful not to damage the cover seal surface.

INSTALLATION

2007 ENGINE 1.8L - Service Information - Caliber

<u>Fig. 205: Front Crankshaft Seal Installer</u> Courtesy of CHRYSLER LLC

1. Place seal (1) onto Seal installer 9506 (2) with seal spring towards the inside of engine.

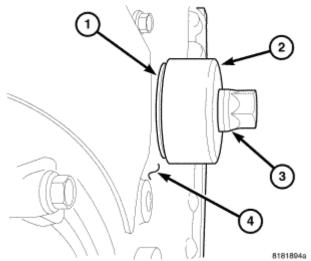

Fig. 206: Installing Front Seal Courtesy of CHRYSLER LLC

2. Install new seal (1) by using Seal installer 9506 (2) and crankshaft damper bolt (3).

2007 ENGINE 1.8L - Service Information - Caliber

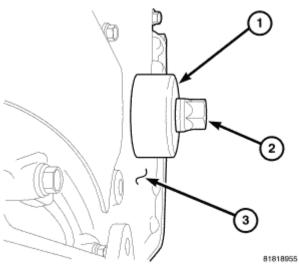

Fig. 207: Front Seal Installed Courtesy of CHRYSLER LLC

- 3. Press seal into front cover until Seal Installer 9506 (1) seats against timing chain cover (3).
- 4. Remove seal installer 9506 (1).

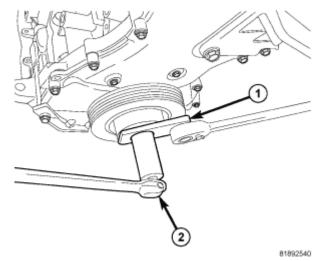

Fig. 208: Damper Removal Courtesy of CHRYSLER LLC

- 5. Install crankshaft vibration damper.
- 6. Oil the bolt threads and between the bolt head and washer.
- 7. Install damper retaining bolt and damper holder 9707 (1). Tighten bolt to 50 N.m + 68° (37 ft. lbs. + 68°).

SEAL-CRANKSHAFT OIL REAR

REMOVAL

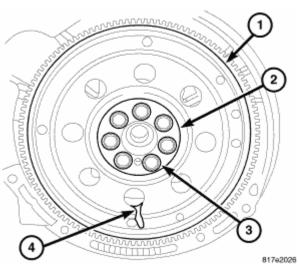

Fig. 209: FLEX PLATE
Courtesy of CHRYSLER LLC

- 1. Remove transaxle
- 2. Remove flex plate bolts and discard.
- 3. Remove flex plate (1).

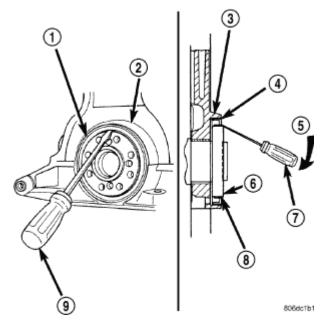

Fig. 210: Rear Crankshaft Oil Seal - Removal Courtesy of CHRYSLER LLC

4. Insert a 3/16 flat bladed screwdriver (7) between the dust lip (8) and the metal case (4) of the crankshaft seal (1). Angle the screwdriver through the dust lip against metal case of the seal. Pry out seal.

CAUTION: Do not permit the screwdriver blade to contact crankshaft seal surface. Contact of the screwdriver blade against crankshaft edge

2007 ENGINE 1.8L - Service Information - Caliber

(chamfer) is permitted.

5. Check to make sure the seals garter spring is not on the crankshaft.

INSTALLATION

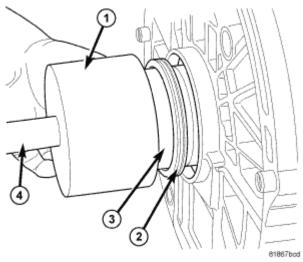

Fig. 211: REAR MAIN INSTALLATION Courtesy of CHRYSLER LLC

CAUTION: If a burr or scratch is present on the crankshaft edge (chamfer), cleanup with 800 emery cloth to prevent seal damage during installation of new seal. If emery cloth is used, the crankshaft must be cleaned off Mopar® brake parts cleaner.

NOTE: When installing seal, lubricate Seal Guide 9509 with clean engine oil.

- 1. Place Seal Guide 9509 (3) on crankshaft.
- 2. Position seal (2) over guide tool. Guide tool should remain on crankshaft during installation of seal. Ensure that the lip of the seal is facing towards the crankcase during installation.
- 3. Drive the seal into the block using Seal Driver 9706 (1) and Driver Handle C-4171 (4) until Seal Driver 9706 bottoms out against the block.

2007 ENGINE 1.8L - Service Information - Caliber

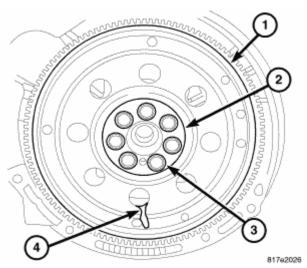

Fig. 212: FLEX PLATE
Courtesy of CHRYSLER LLC

- 4. Install flex plate (1).
- 5. Install washer (2).
- 6. Install new flex plate bolts (3) and tighten to 95 N.m (70 ft. lbs.).
- 7. Install transaxle. Refer to TRANSMISSION/TRANSAXLE INSTALLATION for procedure.

PISTON & ROD-CONNECTING

DESCRIPTION

The pistons are made of a cast aluminum alloy. The pistons have pressed-in pins attached to forged connecting rods. The pistons pin is offset 0.8 mm (0.0314 in.) towards the thrust side of the piston. The connecting rods are a cracked cap design and are not repairable. The piston with rings, connecting rod and piston pin are serviced as an assembly.

STANDARD PROCEDURE

PISTON SELECTION

2007 ENGINE 1.8L - Service Information - Caliber

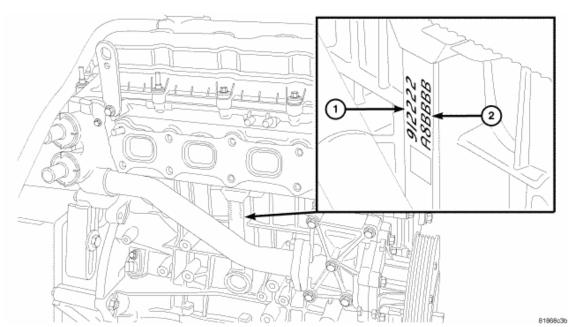

Fig. 213: Locating Piston Identification Courtesy of CHRYSLER LLC

The pistons are select fit to each bore. There are three different grades of pistons available; A, B, and C. The piston identification (2) is located in the middle of the block on the right side of the engine. The bore identification starts at the top and reads downward. Bore #1 is at the top and bore #4 is at the bottom.

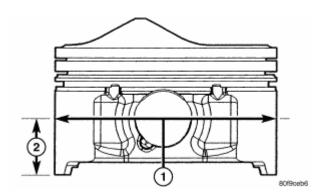

The piston, rings and rod are serviced as an assembly, after determining what size piston is needed, refer to **STANDARD PROCEDURE** to determine correct rod bearing size.

PISTON TO CYLINDER BORE FITTING

NOTE: Pistons and cylinder bores should be measured at normal room temperature, 21°C (70°F).

Piston and cylinder wall must be clean and dry. Piston diameter should be measured 90 degrees to piston pin (1).

1. Measurement should be taken approximately 17 mm (0.669 in.) from the bottom of the skirt (2) as shown.

2007 ENGINE 1.8L - Service Information - Caliber

Fig. 214: Piston To Cylinder Bore Fitting Courtesy of CHRYSLER LLC

NOTE: Correct piston to bore clearance must be established in order to assure quiet and economical operation.

2. Cylinder bores should be measured halfway down the cylinder bore and transverse (measurement location B) to the engine crankshaft center line shown. Refer to for Engine Specifications. See **SPECIFICATIONS**.

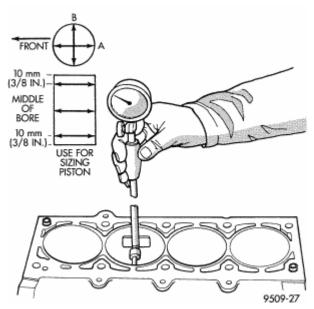

Fig. 215: Measuring Cylinder Bores Courtesy of CHRYSLER LLC

REMOVAL

PISTON AND CONNECTING ROD

2007 ENGINE 1.8L - Service Information - Caliber

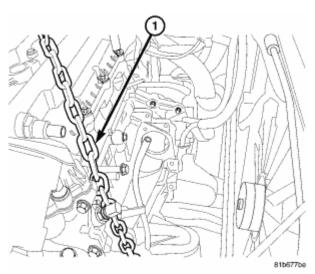

Fig. 216: LIFT CHAIN
Courtesy of CHRYSLER LLC

NOTE: Pistons, rings, and rods are serviced as an assembly.

CAUTION: To maintain engine balance, 1, 3, or 4 pistons can be replaced. If 2 pistons are replaced, engine will be out of balance.

- 1. Remove engine. See **REMOVAL**.
- 2. Mount engine on a suitable engine stand and remove lift chain (1).
- 3. Remove cylinder head. See **REMOVAL**.

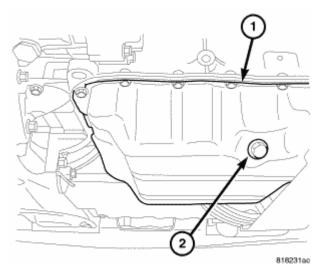

Fig. 217: OIL DRAIN PLUG Courtesy of CHRYSLER LLC

- 4. Drain engine oil (2).
- 5. Remove oil pan (1). See **REMOVAL**.

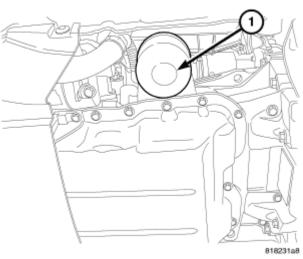

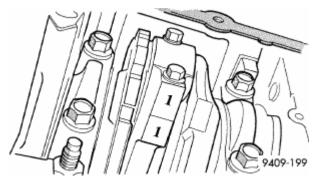

Fig. 218: OIL FILTER
Courtesy of CHRYSLER LLC

- 6. Remove oil filter (1).
- 7. Remove balance shaft assembly.
- 8. Remove ladder frame.

NOTE: Remove any carbon build up and clean debris from cylinder prior to piston removal to avoid scratching piston skirts.

9. Remove top ridge of cylinder bores with a reliable ridge reamer before removing pistons from cylinder block. **Be sure to keep tops of pistons covered during this operation**.

<u>Fig. 219: Identify Connecting Rod to Cylinder-Typical</u> Courtesy of CHRYSLER LLC

- 10. Rotate crankshaft so that each connecting rod is centered in cylinder bore.
- 11. Using a permanent ink or paint marker, identify cylinder number on each connecting rod cap.

CAUTION: DO NOT use a number stamp or a punch to mark connecting rods, as damage to connecting rod could occur.

2007 ENGINE 1.8L - Service Information - Caliber

CAUTION: Care must be taken not to damage the fractured rod and cap joint surfaces, as engine damage many occur.

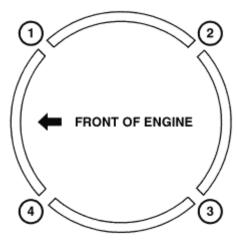

12. Remove connecting rod bolts and cap.

NOTE: Do not reuse connecting rod bolts.

- 13. Carefully push each piston and rod assembly out of cylinder bore. Re-install bearing cap on the mating rod.
- 14. Repeat procedure for each piston and connecting rod assembly.

INSTALLATION

PISTON AND CONNECTING ROD

808aattd

Fig. 220: Piston Ring End Gap Position Courtesy of CHRYSLER LLC

- 1. Install piston rings on piston. See **INSTALLATION**.
- 2. Before installing pistons and connecting rod assemblies into the bore, be sure that top compression ring gap (1) and the second compression ring gap (3) are staggered so that neither is in line with oil ring rail gap.
- 3. Before installing the ring compressor, make sure the oil ring expander ends are butted (1) and the rail gaps (2,4) located as shown above. As viewed from the top of the piston.
- 4. Immerse the piston head and rings in clean engine oil, slide the ring compressor, over the piston. **Be sure position of rings does not change during this operation**.

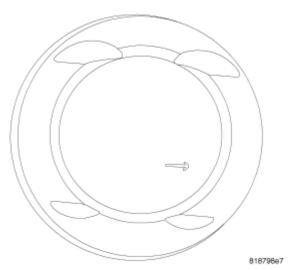

Fig. 221: PISTON INSTALLATION Courtesy of CHRYSLER LLC

- 5. The directional arrow stamped on the piston should face toward the front of the engine.
- 6. Rotate crankshaft so that the connecting rod journal is on the center of the cylinder bore. Lubricate connecting rod journal with clean engine oil.

NOTE: There are three different size rod bearings, perform rod bearing selection procedure.

NOTE: The rod bearing sizes are indicated on the nose of the crankshaft.

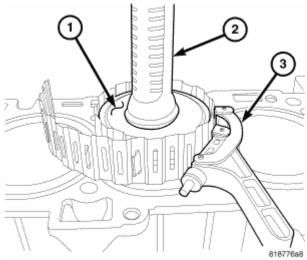

Fig. 222: RING COMPRESSOR Courtesy of CHRYSLER LLC

- 7. Install connecting rod upper bearing half into connecting rod.
- 8. Install ring compressor (3).

2007 ENGINE 1.8L - Service Information - Caliber

9. Tap the piston (1) down in cylinder bore, using a hammer handle (2). At the same time, guide connecting rod into position on connecting rod journal.

NOTE: The connecting rod cap bolts should NOT be reused.

- 10. Before installing the **NEW** bolts, the threads should be coated with clean engine oil.
- 11. Install connecting rod lower bearing half into connecting rod cap. Install connecting rod cap.
- 12. Install each bolt finger tight then alternately torque each bolt to assemble the cap properly.
- 13. Tighten the connecting rod bolts using the 2 step torque-turn method. Tighten according to the following values:

CAUTION: Do not use a torque wrench for the second step.

Tighten the bolts to 20 N.m (15 ft. lbs.).

Tighten the connecting rod bolts an additional 90°.

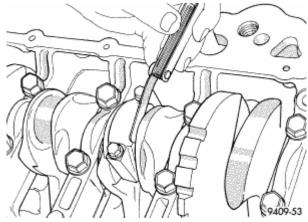

Fig. 223: Connecting Rod Side Clearance Courtesy of CHRYSLER LLC

- 14. Using a feeler gauge, check connecting rod side clearance. See **SPECIFICATIONS**. for connecting rod side clearance.
- 15. Install the ladder frame. See **INSTALLATION**.
- 16. Install oil pump. See **INSTALLATION**.
- 17. Install oil pan. See **INSTALLATION**.
- 18. Install cylinder head. See **INSTALLATION**.

2007 ENGINE 1.8L - Service Information - Caliber

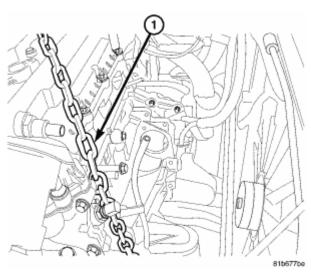

Fig. 224: LIFT CHAIN
Courtesy of CHRYSLER LLC

- 19. Install engine lift chain (1).
- 20. Install engine. See **INSTALLATION**.

BEARINGS-CRANKSHAFT MAIN

STANDARD PROCEDURE

NOTE: There are th

There are three different possibilities for the upper main bearings and five different lower main bearings. The upper and lower bearing shells are not interchangeable.

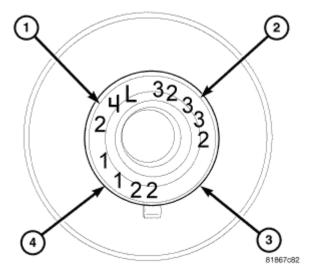

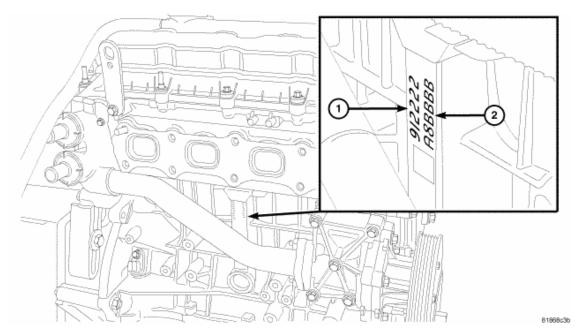

Fig. 225: BEARING SELECTION Courtesy of CHRYSLER LLC

The lower main bearing identification (2) is stamped in the nose of the crankshaft (3). There are 5 different

2007 ENGINE 1.8L - Service Information - Caliber

bearing sizes available 0 through 4.

CRANKSHAFT IDENTIFICATION		LOWER CRANKSHAFT BEARING SELECTION	
JOURNAL DIAMETER GRADE	DIMENSION	LOWER MAIN BEARING SIZE CLASSIFICATION	LOWER MAIN BEARING DIMENSION
0	52 mm, -0.012 to - 0.015 mm	0 (Pink or Red)	2 mm, 0 to -0.003 mm
1	52 mm, -0.015 to - 0.018 mm	1 (Black)	2 mm, +0.003 to 0 mm
2	52 mm, -0.018 to - 0.021 mm	2 (No Color)	2 mm, +0.006 to +0.003 mm
3	52 mm, -0.021 to - 0.024 mm	3 (Green)	2 mm, +0.009 to +0.006 mm
4	52 mm, -0.024 to - 0.027 mm	4 (Blue)	2 mm, +0.012 to +0.009 mm

<u>Fig. 226: Main Bearing Selection Chart</u> Courtesy of CHRYSLER LLC

The upper main bearing shell identification (1) is located in the middle of cylinder block on the right side of the engine. There are three different size bearings available. The bearing class is read downward from top and corresponds to the front journal to the rear journal on the bottom.

BEARINGS-CONNECTING ROD

STANDARD PROCEDURE

CONNECTING ROD - FITTING

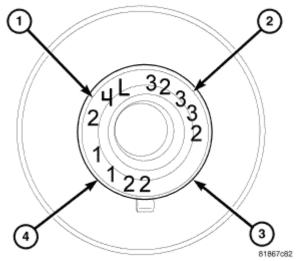

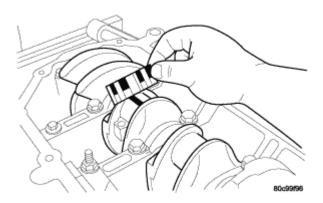

Fig. 227: BEARING SELECTION Courtesy of CHRYSLER LLC

There are three different sizes of rod bearings available. Connecting rod bearing identification (4) can be found on the nose of the crankshaft (3). Use the table below for proper bearing selection.

CONNECTING ROD BEARING SELECTION

CRANKSHAFT PIN DIAMETER GRADE	DIMENSION	CONNECTING ROD BEARING CLASSIFICATION	CONNECTING ROD BEARING DIMENSION
1	48 mm	1 (Black)	1.5 mm
2	48 mm	2 (No Color)	1.5 mm
3	48 mm	3 (Green)	1.5 mm

2007 ENGINE 1.8L - Service Information - Caliber

<u>Fig. 228: Connecting Rod Bearing Clearance - Typical</u> Courtesy of CHRYSLER LLC

1. For measuring connecting rod bearing clearance procedure and use of Plastigage. Refer to **SPECIFICATIONS** for bearing clearance. Refer to **SPECIFICATIONS** for engine specifications.

NOTE: The rod bolts should not be reused.

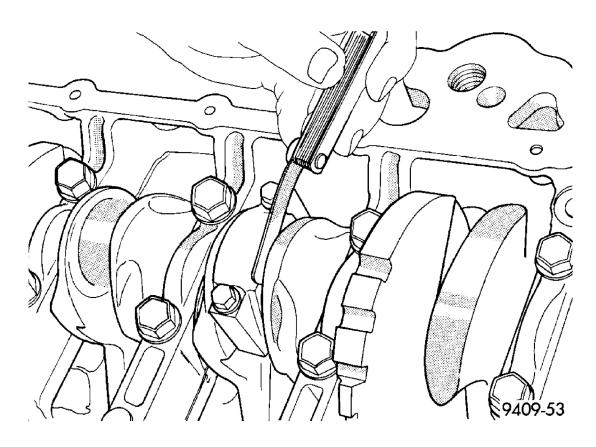

- 2. Before installing the **NEW** rod bolts the threads and under the bolt head should be oiled with clean engine oil.
- 3. Install each bolt finger tight then alternately torque each bolt to assemble the cap properly.
- 4. Tighten the connecting rod bolts using the 2 step torque-turn method. Tighten according to the following values:

CAUTION: Do not use a torque wrench for the second step.

Tighten the bolts to 27 N.m (20 ft. lbs.).

Tighten the connecting rod bolts an additional 90°.

2007 ENGINE 1.8L - Service Information - Caliber

<u>Fig. 229: Checking Connecting Rod Side Clearance - Typical Courtesy of CHRYSLER LLC</u>

5. Using a feeler gauge, check connecting rod side clearance. Refer to clearance specifications. See **SPECIFICATIONS**.

RINGS-PISTON

STANDARD PROCEDURE

PISTON RING - FITTING

2007 ENGINE 1.8L - Service Information - Caliber

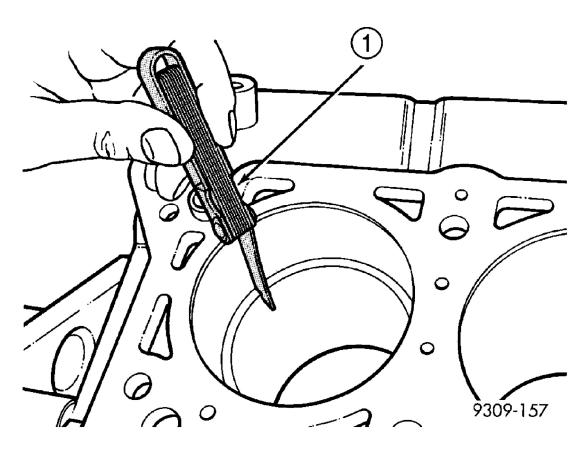

Fig. 230: Measuring Piston Ring Gap Courtesy of CHRYSLER LLC

1. Wipe cylinder bore clean. Insert ring and push down with piston to ensure it is square in bore. The ring gap measurement must be made with the ring positioning at least 13 mm (0.50 inch) from bottom of cylinder bore and below the bottom of the oil ring travel where cylinder bore has minimal wear. Check gap with feeler gauge. Refer to Engine Specifications.

NOTE:

Ring end gap measurements are sensitive to the ring being square in the bore. Care must be used to avoid tilting the rings in cylinder bores when taking measurements.

2007 ENGINE 1.8L - Service Information - Caliber

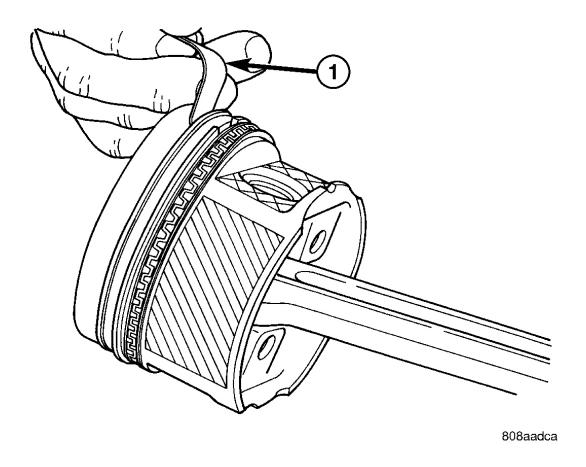

Fig. 231: Measuring Piston Ring Side Clearance Courtesy of CHRYSLER LLC

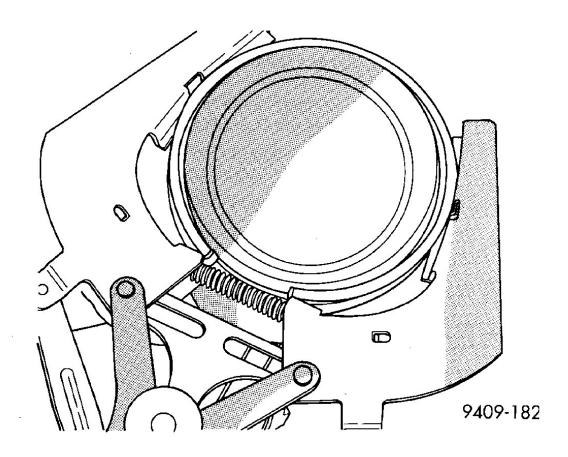

2. Check piston ring to groove side clearance. Refer to **SPECIFICATIONS**.

CAUTION: Exercise care when using tools on piston. Do not scratch or gouge piston surface or ring grooves as this may cause engine damage.

REMOVAL

PISTON RINGS

2007 ENGINE 1.8L - Service Information - Caliber

<u>Fig. 232: Removing/Installing Piston Rings</u> Courtesy of CHRYSLER LLC

- 1. Using a suitable ring expander, remove upper and intermediate piston rings.
- 2. Remove the upper oil ring side rail, lower oil ring side rail and then oil ring expander from piston.
- 3. Clean ring grooves of any carbon deposits.

INSTALLATION

PISTON RINGS

2007 ENGINE 1.8L - Service Information - Caliber

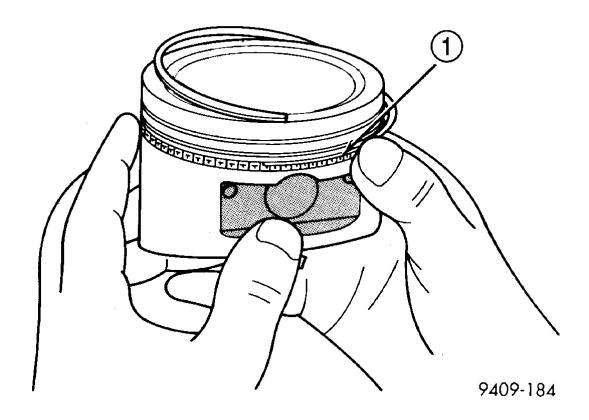

Fig. 233: Installing Side Rail Courtesy of CHRYSLER LLC

NOTE: The identification mark on face of upper and intermediate piston rings must point toward top of piston.

CAUTION: Install piston rings in the following order:

Oil ring expander.

Upper oil ring side rail.

Lower oil ring side rail.

No. 2 Intermediate piston ring.

No. 1 Upper piston ring.

- 1. Install oil ring expander.
- 2. Install upper side rail first and then the lower side rail. Install the side rails by placing one end between the piston ring groove and the oil ring expander. Hold end firmly and press down the portion to be installed until side rail is in position. **Do not use a piston ring expander.**

2007 ENGINE 1.8L - Service Information - Caliber

NOTE: On normally aspirated engines, the compression rings are marked Y1 for

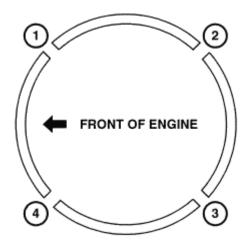

the upper compression ring and Y2 for the second compression ring.

These markings must face upward.

NOTE: On turbocharged engines, the compression rings are marked "TOP".

"TOP" must face upward.

3. Install No. 2 piston ring and then No. 1 piston ring.

808aa#

Fig. 234: PISTON RING END GAP POSITION Courtesy of CHRYSLER LLC

NOTE: Install the piston rings so the gaps positioned as indicated with the piston

viewed from the top.

NOTE: Staggering ring gap is important for oil control.

4. Install the oil expander so the ring gap is located in the (1) position.

- 5. Install the oil ring rails so the ring gap is located in the (2,4) position.
- 6. Install the second compression ring so the ring gap is located in the (3) position.
- 7. Install the top compression so the ring gap is located in the (1) position.

DAMPER-VIBRATION

REMOVAL

2007 ENGINE 1.8L - Service Information - Caliber

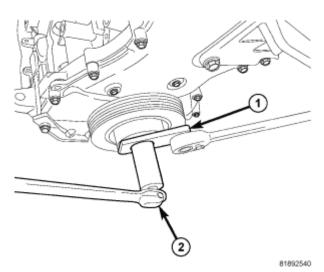

Fig. 235: DAMPER REMOVAL Courtesy of CHRYSLER LLC

- 1. Remove accessory drive belts. Refer to REMOVAL.
- 2. Install Damper holder 9707 (1).
- 3. Remove crankshaft damper bolt.
- 4. Pull damper off crankshaft.

INSTALLATION

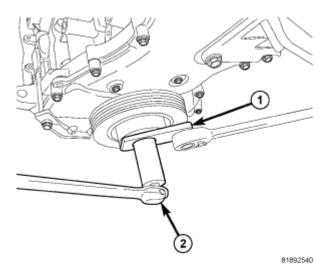

Fig. 236: DAMPER REMOVAL Courtesy of CHRYSLER LLC

- 1. Install crankshaft damper.
- 2. Apply clean engine oil crankshaft damper bolt threads and between bolt head and washer. Tighten bolt to 210 N.m (155 ft. lbs.).
- 3. Install accessory drive belts. Refer to **INSTALLATION**.

2007 ENGINE 1.8L - Service Information - Caliber

FRAME-LADDER

REMOVAL

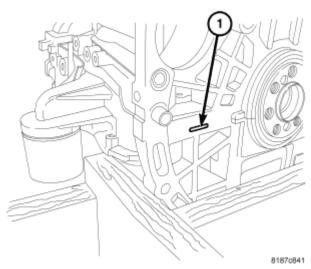

Fig. 237: PRY POINT 1
Courtesy of CHRYSLER LLC

- 1. Remove oil pan. See **REMOVAL**.
- 2. Remove oil pump. See **REMOVAL**.
- 3. Remove ladder frame retaining bolts.
- 4. Remove ladder frame using pry point cast in the rear of the block (1).

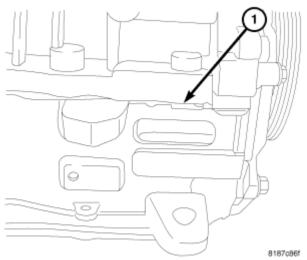

Fig. 238: PRY POINT 2
Courtesy of CHRYSLER LLC

5. To assist in removing the ladder frame another (1) pry point cast in the right side of the block.

CLEANING

2007 ENGINE 1.8L - Service Information - Caliber

Clean ladder frame with a plastic or wooden scraper and a suitable solvent.

INSTALLATION

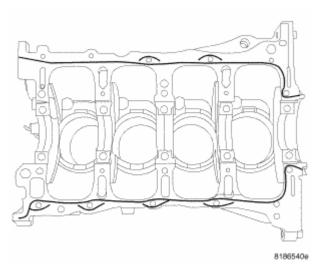

Fig. 239: SEALING LADDER FRAME Courtesy of CHRYSLER LLC

NOTE: Parts must be assembled before within 10 before RTV skins.

1. Apply a 2 mm bead of RTV as shown.

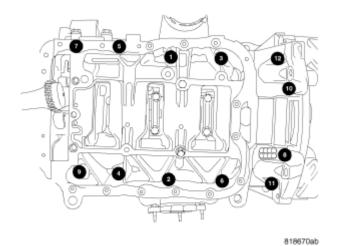

Fig. 240: LADDER FRAME TORQUE Courtesy of CHRYSLER LLC

2. Install bolts and torque as shown following a two step method.

First: All to 10 N.m (7ft. lbs.)

Second: All to 22 N.m (16 ft. lbs.)

3. Install oil pump. See **INSTALLATION**.

4. Install oil pan. See **INSTALLATION**.

ENGINE MOUNTING

DESCRIPTION

The engine mounting system consists of a four-point system utilizing two load-carrying mounts and two torque controlling mounts. The load-carrying mounts are located on each frame rail. The right and left mounts are hydro-elastic mounts. The two torque controlling mounts are attached to a fore/aft member and the front and rear of the engine.

OPERATION

The four-point engine mounting system minimizes the transmission of structure-borne engine noise to the passenger compartment. The load-carrying right and left mounts dampen and isolate vertical motion and vibration. The front and rear mount absorb torque reaction forces and torsional vibrations.

MOUNT-RIGHT

REMOVAL

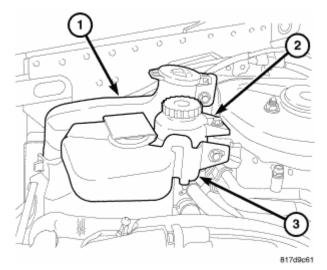

Fig. 241: COOLANT RESERVOIR
Courtesy of CHRYSLER LLC

- 1. Remove coolant reservoir (3) and set aside.
- 2. Remove power steering reservoir (2) and set aside.
- 3. Remove windshield washer bottle (1).

MOUNT-FRONT

REMOVAL

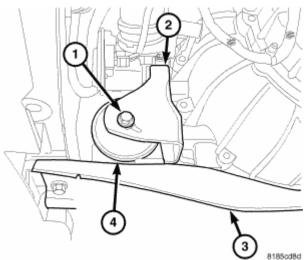

Fig. 253: FRONT MOUNT THROUGH BOLT Courtesy of CHRYSLER LLC

- 1. Raise vehicle.
- 2. Remove fore aft member (3) to mount (4) bolts.
- 3. Remove mount through bolt (1).
- 4. Remove fore aft member (3) mounting bolts and remove.
- 5. Remove front mount (4).

2007 ENGINE 1.8L - Service Information - Caliber

INSTALLATION

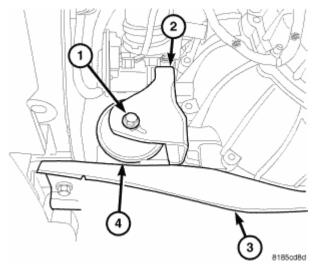

Fig. 254: FRONT MOUNT THROUGH BOLT Courtesy of CHRYSLER LLC

- 1. Position mount (4) and torque bolts to 47 N.m (35 ft. lbs.).
- 2. Install fore aft member (3) and torque bolts to 100N.m (74 ft. lbs.).
- 3. Install mount through bolt (1) and torque to 47 N.m (35 ft. lbs.).
- 4. Lower vehicle.

MOUNT-REAR

REMOVAL

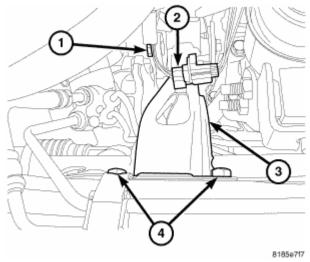

Fig. 255: REAR MOUNT-ATX Courtesy of CHRYSLER LLC

1. Remove rear mount retaining bolts (4).

2007 ENGINE 1.8L - Service Information - Caliber

- 2. Remove rear mount through bolt (1).
- 3. Remove oxygen sensor connector (2) from mount.
- 4. Remove rear mount (3).

INSTALLATION

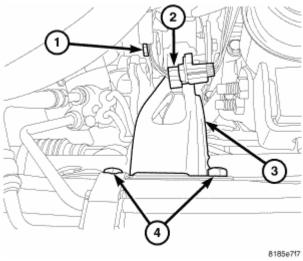

Fig. 256: REAR MOUNT-ATX Courtesy of CHRYSLER LLC

- 1. Position rear mount (3).
- 2. Install rear mount retaining bolts (4) and torque to 50 N.m (37 ft. lbs.).
- 3. Install rear mount through bolt (1) and torque to 47 N.m (35 ft. lbs.).
- 4. Install oxygen sensor connector (2) retainer to mount (3).

LUBRICATION

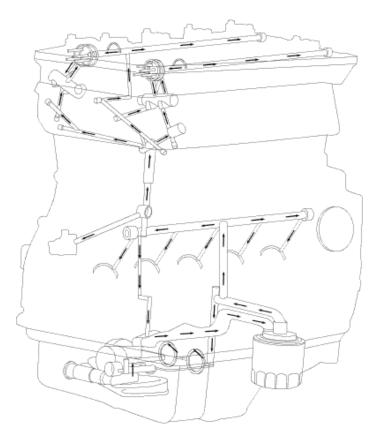

DESCRIPTION

ENGINE LUBRICATION

The lubrication system is a full-flow filtration, pressure feed type. The oil pump is chain driven by the crankshaft. Oil pressure is controlled by a relief valve mounted inside the oil pump housing.

ENGINE LUBRICATION SYSTEM

2007 ENGINE 1.8L - Service Information - Caliber

81867bc9

Fig. 257: OIL FLOW DIAGRAM Courtesy of CHRYSLER LLC

The lubrication system is a full-flow filtration, pressure feed type. The balance shaft module (BSM) is mounted below the ladder frame and chain driven by the crankshaft. The BSM consists of a non-serviceable pump, oil pressure relief valve, and a non-serviceable balance assembly.

NOTE: Not all engine blocks will be machined with the bolt on timing chain oil squirter. Some engines will be machined with an oil hole (1).

OPERATION

Engine oil is drawn up through the pickup screen and is pressurized by the oil pump and routed through the oil filter to the main oil gallery running the length of the cylinder block. A diagonal hole in each bulkhead feeds oil to each main bearing. Drilled passages within the crankshaft route oil from the main bearing journals to the connecting rod journals. The main oil gallery also feeds oil pressure to the timing chain tensioner. A vertical hole at the number one bulkhead routes pressurized oil through a filter up into the cylinder head. The oil then divides into three passages; one to the intake cam phaser, one to the exhaust cam phaser and one to the camshafts. The passage to the camshafts divides to feed both of the hollow camshafts at the second cam journal. The rest of cam journals are feed oil through the hollow camshafts. The #1 cam journals are feed oil through the VVT oil passages. Oil passages to the phasers are directed through the OCV (oil control valves) to the #1 journals. The oil then flows through the camshafts then to the cam phasers. Oil returning to the pan from pressurized components supplies lubrication to the valve stems, cam lobes, and tappets. Cylinder bores and

2007 ENGINE 1.8L - Service Information - Caliber

wrist pins are splash lubricated from directed slots on the connecting rod thrust collars.

DIAGNOSIS AND TESTING

CHECKING ENGINE OIL PRESSURE

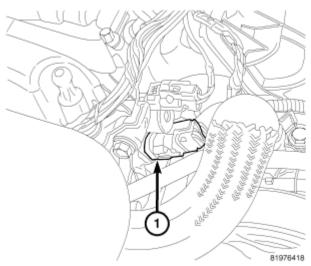

Fig. 258: OIL TEMPERATURE SENSOR Courtesy of CHRYSLER LLC

NOTE: Anytime the oil temperature sensor is removed, it should be replaced with a new sensor.

1. Disconnect and remove oil temperature sensor (1).

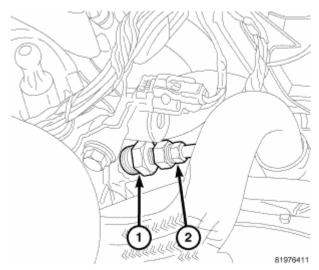

Fig. 259: OIL PRESSURE ADAPTER 9879 Courtesy of CHRYSLER LLC

CAUTION: Threads in cylinder head are British Standard Pipe (BSP). Do not

2007 ENGINE 1.8L - Service Information - Caliber

install a NPT threaded adapter, this could crack the cylinder block.

- 2. Install threaded adapter 9879 (1).
- 3. Install oil pressure gauge (2).

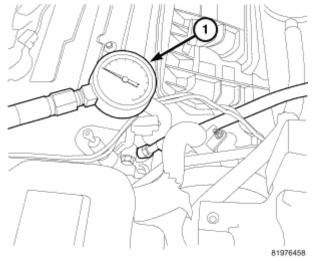

Fig. 260: OIL PSI GAUGE Courtesy of CHRYSLER LLC

4. Start engine and record reading on oil pressure gauge (1).

CAUTION: If oil pressure is 0 at idle, do not perform the 3000 RPM test

- 5. If oil pressure is 0 at idle, shut off engine. Check for pressure relief valve stuck open, a clogged oil pick-up screen.
- 6. Remove oil pan and inspect for debris. See REMOVAL.
- 7. Remove oil pressure relief valve. See **REMOVAL**.
- 8. Inspect oil pressure relief valve. Refer to **INSPECTION**. if damaged replace.
- 9. If pressure relief valve is ok, replace oil pump assembly. See **REMOVAL**.

2007 ENGINE 1.8L - Service Information - Caliber

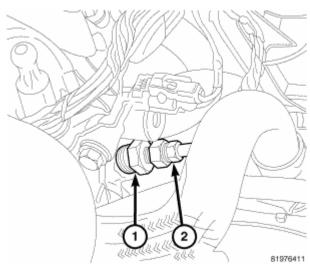

Fig. 261: OIL PRESSURE ADAPTER 9879 Courtesy of CHRYSLER LLC

10. After test is complete, remove oil pressure gauge (2) and adapter 9879 (1).

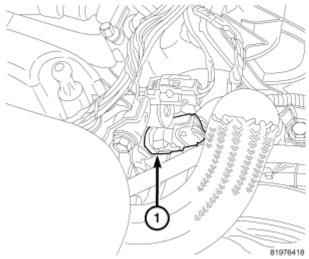

Fig. 262: OIL TEMPERATURE SENSOR Courtesy of CHRYSLER LLC

11. Install a new oil pressure temperature sensor (1) and connect electrical connector.

DIAGNOSIS AND TESTING-VVT OIL PRESSURE

This test can be used to help diagnose VVT faults.

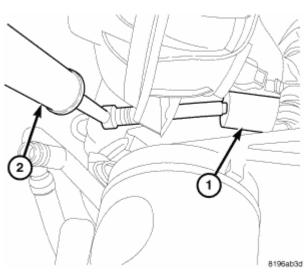

Fig. 263: OIL PRESSURE SENSOR Courtesy of CHRYSLER LLC

1. Disconnect and remove oil pressure sensor (1).

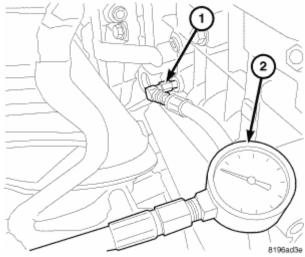

Fig. 264: OIL PRESSURE GAUGE Courtesy of CHRYSLER LLC

CAUTION: Threads in block are 1/8"-28 British Standard Pipe (BSP). Do not install a National Pipe Thread (NPT) threaded adapter, this could crack the cylinder block.

- 2. Install an 1/8-28 BSP male to 1/8-27 female threaded adapter (1).
- 3. Install oil pressure gauge (2).
- 4. Start engine and record oil pressure.

CAUTION: If oil pressure is 0 at idle, do not perform the 3000 RPM test

2007 ENGINE 1.8L - Service Information - Caliber

- 5. If oil pressure is 0 at idle, shut off engine, check for pressure relief valve stuck open, a clogged oil pick-up screen.
- 6. Remove oil pan and inspect for debris. See **REMOVAL**.
- 7. Remove oil pressure relief valve. See <u>**REMOVAL**</u>. Inspect relief valve, if damaged, replace pressure relief valve.
- 8. If pressure relief valve is ok, replace oil pump assembly. See **REMOVAL**.

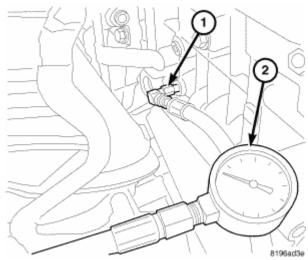

Fig. 265: OIL PRESSURE GAUGE Courtesy of CHRYSLER LLC

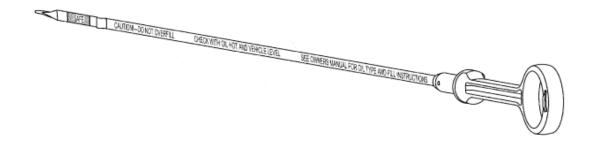

- 9. After test is complete, remove test gauge (2) and fitting (1).
- 10. Install oil pressure sensor and electrical connector.

OIL

STANDARD PROCEDURE

ENGINE OIL LEVEL CHECK

2007 ENGINE 1.8L - Service Information - Caliber

81884c72

Fig. 266: Engine Oil Dipstick
Courtesy of CHRYSLER LLC

NOTE: The engine must be HOT when checking oil level.

The best time to check engine oil level is after the engine is at operating temperature. Allow the engine to be shut off for at least 5 minutes before checking oil level.

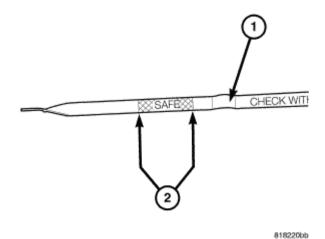

Fig. 267: Oil Level In Safe Range Courtesy of CHRYSLER LLC

Checking the oil while the vehicle is on level ground will improve the accuracy of the oil level reading. Remove dipstick (1), and observe oil level. Add oil only when the level is at or below the SAFE mark. If the oil level is in the safe (2) range, do not add oil.

CAUTION: Do not operate engine if the oil level is above the MAX mark on the dipstick. Excessive oil volume can cause oil aeration which can lead to engine failure due to loss of oil pressure or increase in oil temperature.

2007 ENGINE 1.8L - Service Information - Caliber

ENGINE OIL AND FILTER CHANGE

WARNING: New or used engine oil can be irritating to the skin. Avoid prolonged or repeated skin contact with engine oil. Contaminants in used engine oil, caused by internal combustion, can be hazardous to your health. Thoroughly wash exposed skin with soap and water. Do not wash skin with gasoline, diesel fuel, thinner, or solvents, health problems can result. Do not pollute, dispose of used engine oil properly. Contact your dealer or government agency for location of collection center in your area.

Change engine oil at mileage and time intervals described in the Maintenance Schedule. Refer to **DESCRIPTION**.

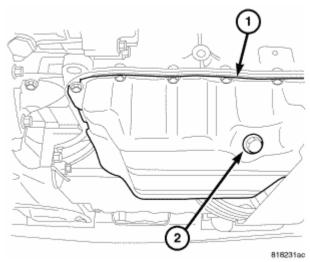

Fig. 268: Oil Drain Plug Courtesy of CHRYSLER LLC

- 1. Run engine until achieving normal operating temperature.
- 2. Position the vehicle on a level surface and turn engine off.
- 3. Remove oil fill cap.
- 4. Raise vehicle on hoist.
- 5. Place a suitable oil collecting container under oil pan drain plug (2).
- 6. Remove oil pan drain plug (2) or and allow oil to drain into collecting container. Inspect drain plug threads for stretching or other damage. Replace drain plug and gasket if damaged.

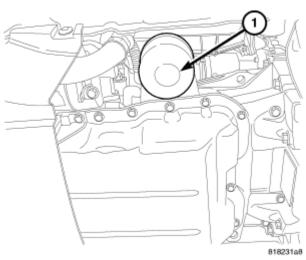

Fig. 269: Oil Filter Courtesy of CHRYSLER LLC

7. Remove oil filter (1). See **REMOVAL**.

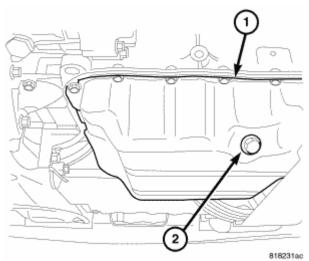

Fig. 270: Oil Drain Plug Courtesy of CHRYSLER LLC

8. Install oil pan drain plug (2) and tighten drain plug to 28 N.m (20 ft. lbs.).

2007 ENGINE 1.8L - Service Information - Caliber

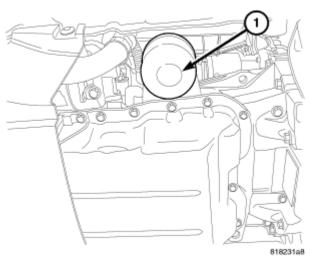

Fig. 271: Oil Filter Courtesy of CHRYSLER LLC

- 9. Install new oil filter (1). See **INSTALLATION**.
- 10. Lower vehicle and fill crankcase with specified type and amount of engine oil. Refer to **SPECIFICATIONS**.
- 11. Install oil fill cap.
- 12. Start engine and inspect for leaks.
- 13. Stop engine and inspect oil level.

OIL FILTER SPECIFICATION

All engines are equipped with a high quality full-flow, disposable type oil filter. Replace oil filter with a Mopar® or the equivalent.

USED ENGINE OIL DISPOSAL

Care should be exercised when disposing used engine oil after it has been drained from a vehicle engine. Refer to the WARNING listed above.

FILTER-OIL

REMOVAL

2007 ENGINE 1.8L - Service Information - Caliber

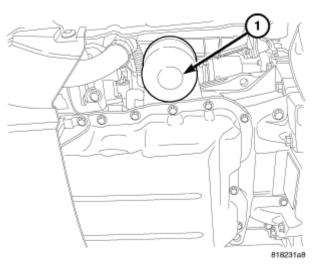

Fig. 272: Oil Filter
Courtesy of CHRYSLER LLC

CAUTION: When servicing the oil filter, avoid deforming the filter can by installing the remove/install tool band strap against the can to base lock seam. The lock seam joining the can to the base is reinforced by the base plate.

1. Using a suitable filter wrench, turn oil filter (1) counterclockwise to remove.

INSTALLATION

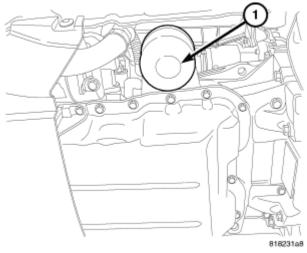

Fig. 273: OIL FILTER
Courtesy of CHRYSLER LLC

- 1. Clean and check filter mounting surface. The surface must be smooth, flat and free of debris or pieces of gasket.
- 2. Lubricate new oil filter gasket.
- 3. Screw oil filter (1) on until the gasket contacts base. Tighten to 14 N.m (11 ft. lbs.).

PAN-OIL

REMOVAL

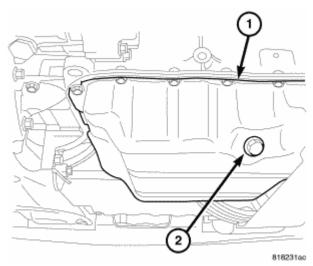

Fig. 274: Oil Drain Plug Courtesy of CHRYSLER LLC

- 1. Raise vehicle on hoist.
- 2. Remove oil drain plug (2) and drain the engine oil.
- 3. Remove accessory drive belt splash shield.

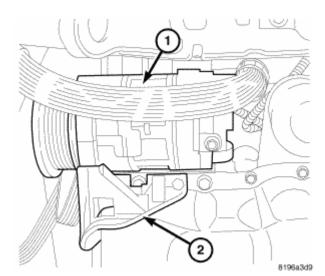

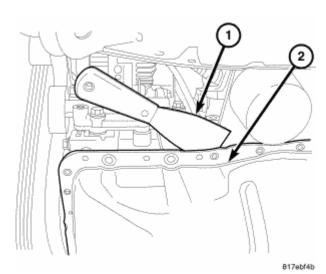

Fig. 275: Lower A/C Compressor Mounting Bolt Courtesy of CHRYSLER LLC

- 4. Remove lower A/C compressor mounting bolt (if equipped).
- 5. Remove A/C mounting bracket (2).

2007 ENGINE 1.8L - Service Information - Caliber

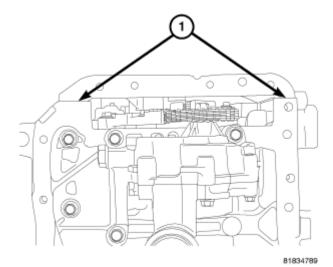

<u>Fig. 276: Loosening Seal Around Oil Pan Using Putty Knife</u> Courtesy of CHRYSLER LLC

NOTE: Do not use pry points in block to remove oil pan.

- 6. Remove oil pan retaining bolts.
- 7. Using a putty knife (1), loosen seal around oil pan (2).
- 8. Remove oil pan (2).

INSTALLATION

<u>Fig. 277: Front Cover-To-Engine Block Parting Lines</u> Courtesy of CHRYSLER LLC

NOTE: Oil pan sealing surfaces must be free of grease or oil.

NOTE: Parts must be assembled within 10 minutes of applying RTV.

1. Apply Mopar® Engine RTV GEN II at the front cover to engine block parting lines (1).

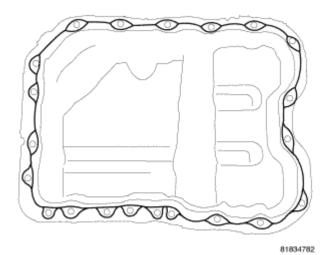

Fig. 278: Applying RTV Around Oil Pan Courtesy of CHRYSLER LLC

- 2. Apply a 2 mm bead of Mopar® Engine RTV GEN II around the oil pan as shown.
- 3. Position oil pan and install bolts. Tighten bolts to 12 N.m (105 in. lbs.).

NOTE: The 2 long bolts must be tightened to 22 N.m (195 in.lbs.).

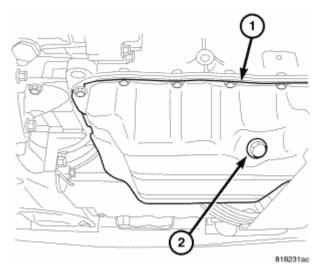

Fig. 279: Oil Drain Plug Courtesy of CHRYSLER LLC

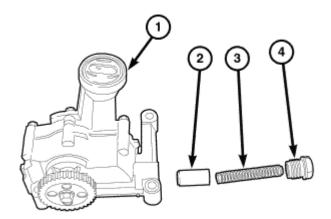

- 4. Install oil drain plug (2).
- 5. Lower vehicle and fill engine crankcase with proper oil to correct level.
- 6. Start engine and check for leaks.

VALVE-OIL PRESSURE RELIEF

REMOVAL

NOTE: Oil pressure relief valve can be serviced without removing oil pump from the engine.

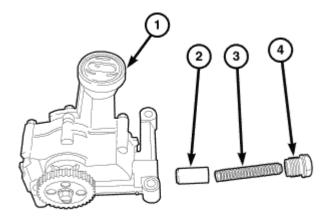

817ec3bb

Fig. 280: Pressure Relief Valve - 1.8L Courtesy of CHRYSLER LLC

- 1. Remove oil pan. See **REMOVAL**.
- 2. Remove cap (4).
- 3. Remove spring (3) and valve (2).
- 4. Inspect valve (2) and pump (1) bore seizure or scoring. Replace as needed.

INSTALLATION

817ec3bb

Fig. 281: Pressure Relief Valve - 1.8 L

2007 ENGINE 1.8L - Service Information - Caliber

Courtesy of CHRYSLER LLC

- 1. Lubricate valve (2) and pump (1) bore with clean engine oil.
- 2. Install valve (2) and spring (3).
- 3. Install cap (4) and tighten.
- 4. Install oil pan. See **INSTALLATION**.

PUMP-OIL

REMOVAL

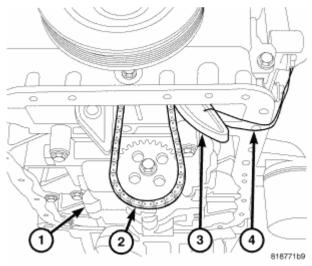

Fig. 282: RELEASE TENSIONER
Courtesy of CHRYSLER LLC

- 1. Remove timing chain cover. See **REMOVAL**.
- 2. Remove oil pan. See **REMOVAL**.
- 3. Pull tensioner guide (3) back and secure with wire (4).
- 4. Remove oil pump mounting bolts.
- 5. Remove oil pump from sprocket from chain (2) and remove pump.

INSPECTION

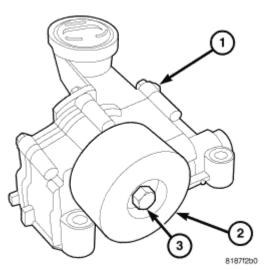

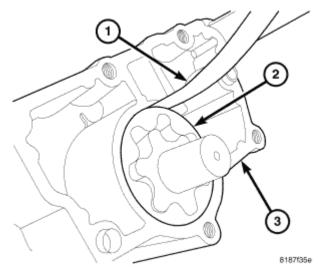

Fig. 283: SPROCKET REMOVAL Courtesy of CHRYSLER LLC

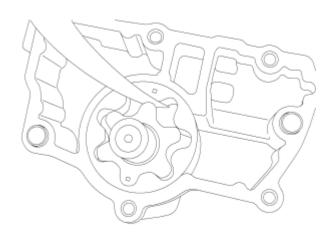

- 1. Remove pressure relief valve. See REMOVAL.
- 2. Inspect pressure relief valve for scoring or damage. If scored or damaged, replace valve.
- 3. Inspect oil pump housing bore for damage or scoring, if found replace pump.
- 4. Remove oil pump drive sprocket using holder 9711 (2).
- 5. Remove oil pump housing retaining bolts.
- 6. Remove oil pump housing.

<u>Fig. 284: OUTER ROTOR TO HOUSING CLEARANCE</u> Courtesy of CHRYSLER LLC

7. Measure outer rotor (2) to housing (3) clearance with feeler gauge (1).

- 12. Measure inner rotor thickness.
- 13. Inspect pump housing for scoring, replace as needed.

817ecfd1

Fig. 290: OIL PUMP HOUSING TORQUE SEQUENCE Courtesy of CHRYSLER LLC

- 14. If pump passes inspections, install pump cover.
- 15. Install retaining bolts and Torque to 10 N.m. (88 in. lbs.).
- 16. Install pressure relief valve. See **INSTALLATION**.

2007 ENGINE 1.8L - Service Information - Caliber

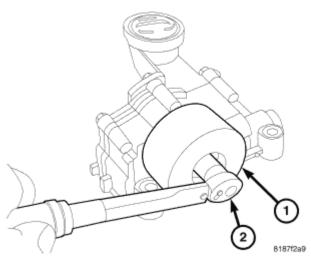

Fig. 291: SPROCKET INSTALLATION Courtesy of CHRYSLER LLC

17. Install pump drive sprocket using holder 9711 (1) and tighten.

INSTALLATION

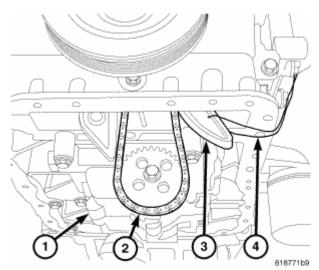

Fig. 292: RELEASE TENSIONER Courtesy of CHRYSLER LLC

- 1. Install oil pump sprocket onto drive chain.
- 2. Install oil pump mounting bolts and tighten.
- 3. Remove wire (4) from tensioner shoe (3).
- 4. Install timing chain cover. See **INSTALLATION**.
- 5. Install oil pan. See **INSTALLATION**.

SENSOR/SWITCH-ENGINE OIL PSI

2007 ENGINE 1.8L - Service Information - Caliber

DESCRIPTION

OIL PRESSURE SWITCH

The oil pressure switch is located on the left front side of the engine block. The oil pressure switch is a pressure sensitive switch that is activated by the engine's oil pressure (in the main oil gallery). The switch is a two terminal device (one terminal is provided to the wiring harness and the other terminal is the switch's metal housing that screws into the engine block).

OPERATION

OIL PRESSURE SWITCH

The oil pressure switch is normally "Closed." The switch changes from a "Closed" circuit to an "Open" circuit, on increasing pressure of 7 psig. The oil pressure switch changes from an "Open" circuit to a "Closed" circuit, on decreasing pressure, between 2 psig and 4 psig.

REMOVAL

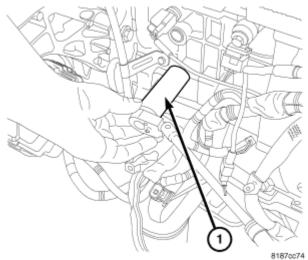

Fig. 293: OIL SENDER
Courtesy of CHRYSLER LLC

- 1. Raise vehicle.
- 2. Disconnect electrical connector.
- 3. Remove oil pressure sensor using oil pressure socket C-4597 (1) and discard sensor.

INSTALLATION

2007 ENGINE 1.8L - Service Information - Caliber

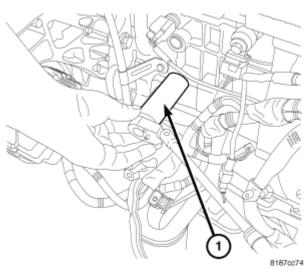

Fig. 294: OIL SENDER
Courtesy of CHRYSLER LLC

NOTE: If the oil pressure sensor is removed, it must be replaced with a new sensor.

CAUTION: The oil pressure switch has tapered threads, over tightening could crack the engine block.

- 1. Install oil pressure sending unit using oil pressure socket C-4597 (1) torque to 8 N.m (71 in. lbs.).
- 2. Connect electrical connector.

SENSOR-OIL TEMPERATURE

REMOVAL

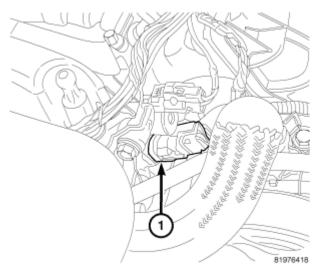

Fig. 295: OIL TEMPERATURE SENSOR Courtesy of CHRYSLER LLC

2007 ENGINE 1.8L - Service Information - Caliber

- 1. Disconnect oil temperature sensor (1) electrical connector.
- 2. Remove sensor (1).

INSTALLATION

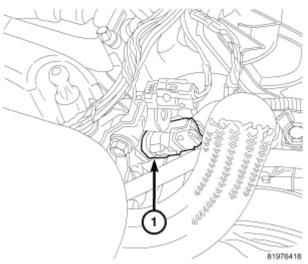

Fig. 296: OIL TEMPERATURE SENSOR Courtesy of CHRYSLER LLC

- 1. If re-using the oil temperature sensor, coat the threads with Mopar® thread sealant.
- 2. Install oil temperature sensor (1). Tighten to 8 N.m (71 in. lbs.).
- 3. Connect electrical connector.

COOLER-OIL

DESCRIPTION

An engine oil cooler is used on some engine packages. The cooler is a coolant-to-oil type and mounted between the oil filter and oil filter adapter.

REMOVAL

NOTE: The oil cooler can not be cleaned out. In the event that the engine requires rebuilding or replacement, the oil cooler should be replaced.

2007 ENGINE 1.8L - Service Information - Caliber

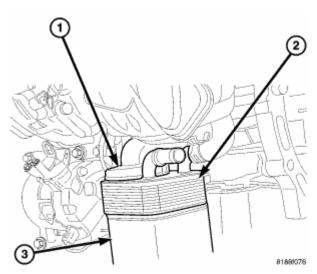

Fig. 297: OIL COOLER Courtesy of CHRYSLER LLC

- 1. Raise vehicle on hoist.
- 2. Drain cooling system. Refer to **STANDARD PROCEDURE**.
- 3. Disconnect oil cooler coolant hoses.
- 4. Remove oil filter (3).

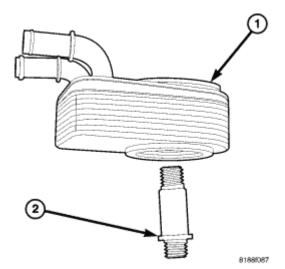

Fig. 298: OIL COOLER MOUNTING Courtesy of CHRYSLER LLC

- 5. Remove oil cooler connector bolt (2).
- 6. Remove oil cooler (1).

INSTALLATION

2007 ENGINE 1.8L - Service Information - Caliber

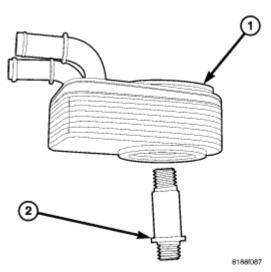

Fig. 299: OIL COOLER MOUNTING Courtesy of CHRYSLER LLC

- 1. Replace oil cooler seal (1).
- 2. Lubricate seal and position oil cooler to oil filter adapter, aligning notch to tab.
- 3. Install oil cooler connector bolt (2). Tighten connector bolt to 55 N.m (41 ft. lbs.).

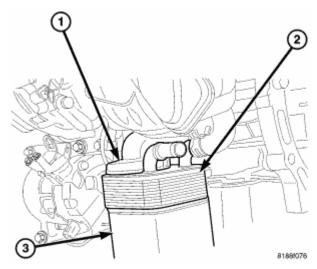

Fig. 300: OIL COOLER Courtesy of CHRYSLER LLC

- 4. Install oil filter (3).
- 5. Connect oil cooler coolant hose.
- 6. Lower vehicle.
- 7. Fill cooling system. Refer to **STANDARD PROCEDURE**.

MANIFOLDS

2007 ENGINE 1.8L - Service Information - Caliber

MANIFOLD-INTAKE

DIAGNOSIS AND TESTING

INTAKE MANIFOLD LEAKS

An intake manifold air leak is characterized by lower than normal manifold vacuum. Also, one or more cylinders may not be functioning.

WARNING: Use extreme caution when the engine is operating. Do not stand in a direct line with the fan. Do not put your hands near the pulleys, belts or the fan. Do not wear loose clothing.

- 1. Start the engine.
- 2. Spray a small stream of water (Spray Bottle) at the suspected leak area.
- 3. If engine RPM'S change, the area of the suspected leak has been found.
- 4. Repair as required.

REMOVAL

WARNING: Release fuel system pressure before servicing system components.

Service vehicles in well ventilated areas and avoid ignition sources. Never smoke while servicing the vehicle.

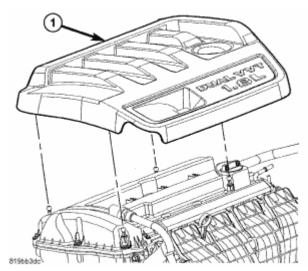

Fig. 301: ENGINE COVER-1.8L Courtesy of CHRYSLER LLC

- 1. Remove engine cover (1).
- 2. Perform fuel system pressure release procedure **before attempting any repairs. Refer to <u>STANDARD PROCEDURE</u>**.

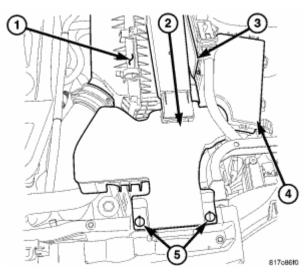

Fig. 302: AIR CLEANER INLET Courtesy of CHRYSLER LLC

3. Remove air cleaner inlet (2).

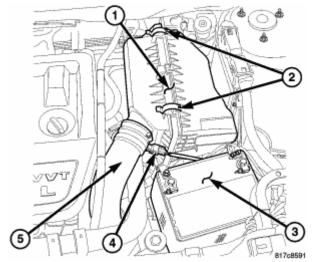

Fig. 303: Air Cleaner Housing Courtesy of CHRYSLER LLC

- 4. Remove air cleaner housing (1).
- 5. Disconnect negative cable at battery (3).

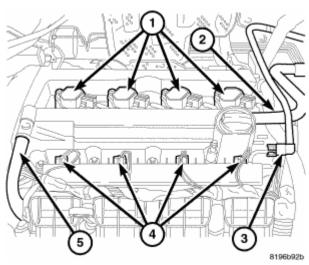

Fig. 304: COIL CONNECTOR Courtesy of CHRYSLER LLC

- 6. Disconnect fuel line at rail (3).
- 7. Remove fuel injector electrical connectors (4).
- 8. Remove fuel rail retaining bolts and remove fuel rail.

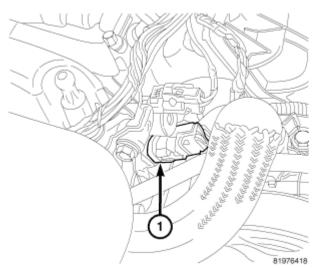

Fig. 305: OIL TEMPERATURE SENSOR Courtesy of CHRYSLER LLC

- 9. Disconnect oil temperature sensor (1).
- 10. Disconnect variable valve timing solenoid electrical connector.
- 11. Disconnect intake camshaft position sensor electrical connector.
- 12. Position harness out of the way.

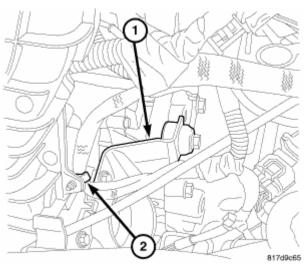

Fig. 306: Throttle Body Support Courtesy of CHRYSLER LLC

- 13. Remove throttle body support bracket (1).
- 14. Disconnect electronic throttle control electrical connector.
- 15. Remove wiring harness retainer from the intake manifold (2).
- 16. Disconnect MAP sensor electrical connector.
- 17. Disconnect vacuum lines at intake.

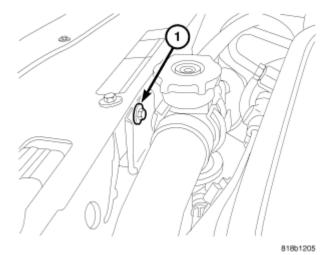

Fig. 307: Radiator Hose Support Courtesy of CHRYSLER LLC

18. Remove upper radiator hose retaining bracket (1).

2007 ENGINE 1.8L - Service Information - Caliber

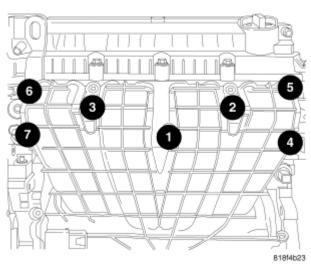

Fig. 308: Torque Sequence Courtesy of CHRYSLER LLC

- 19. Remove intake manifold retaining bolts.
- 20. Remove intake manifold.

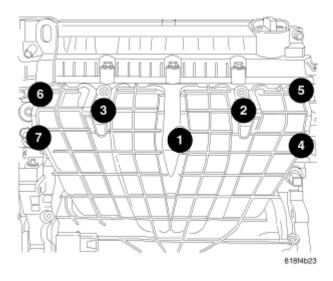

CLEANING

- 1. Discard gasket(s).
- 2. Clean all sealing surfaces.

INSPECTION

- 1. Inspect manifold for cracks, distortion, or mounting surface warpage. Replace manifold if necessary.
- 2. Inspect manifold gasket for surface damage or excessive swelling. Replace gaskets as necessary.

INSTALLATION

2007 ENGINE 1.8L - Service Information - Caliber

Fig. 309: TORQUE SEQUENCE Courtesy of CHRYSLER LLC

- 1. Clean all gasket surfaces.
- 2. Replace intake manifold gasket.
- 3. Install intake manifold, tighten bolts to 25 N.m (220 in. lbs.).
- 4. Install the fuel rail assembly to intake manifold. Tighten bolts to 23 N.m (200 in. lbs.).
- 5. Connect fuel injector electrical connectors.

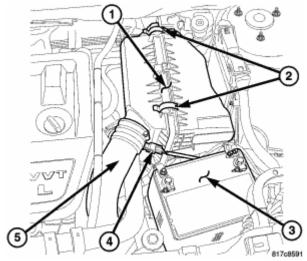

Fig. 310: AIR CLEANER HOUSING Courtesy of CHRYSLER LLC

- 6. Inspect quick connect fittings for damage, replace if necessary. Refer to <u>STANDARD PROCEDURE</u>. Connect fuel supply hose to fuel rail assembly. Check connection by pulling on connector to insure it locked into position.
- 7. Connect negative cable to battery (3).
- 8. Fill the cooling system. Refer to **STANDARD PROCEDURE**.

2007 ENGINE 1.8L - Service Information - Caliber

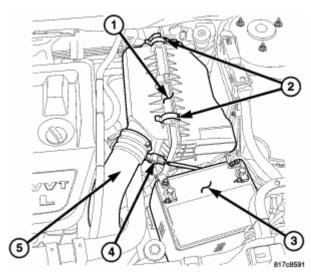

Fig. 311: AIR CLEANER HOUSING Courtesy of CHRYSLER LLC

- 9. Install air cleaner housing (1).
- 10. Install engine cover.

MANIFOLD-EXHAUST

REMOVAL

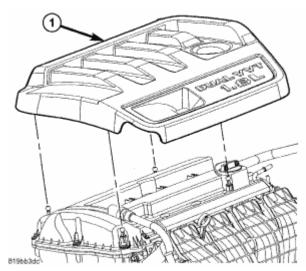

Fig. 312: ENGINE COVER - 1.8L Courtesy of CHRYSLER LLC

- 1. Remove engine cover (1).
- 2. Disconnect negative cable from battery.
- 3. Remove bolts attaching upper heat shield.
- 4. Remove upper heat shield.

5. Disconnect exhaust pipe from manifold.

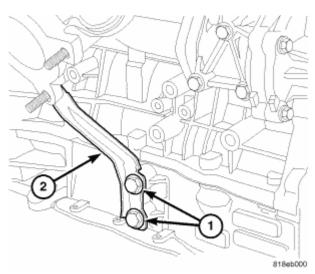

Fig. 313: EXHAUST MANIFOLD SUPPORT BRACKET Courtesy of CHRYSLER LLC

6. Remove manifold support bracket (2).

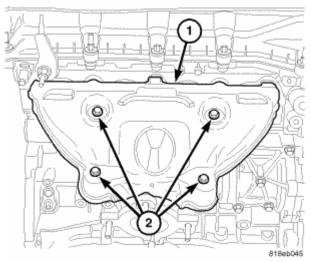

Fig. 314: EXHAUST MANIFOLD HEAT SHIELD Courtesy of CHRYSLER LLC

7. Remove exhaust manifold heat shield (1).

2007 ENGINE 1.8L - Service Information - Caliber

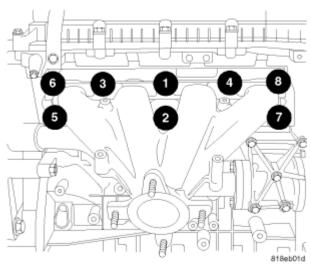

Fig. 315: TORQUE SEQUENCE Courtesy of CHRYSLER LLC

- 8. Disconnect oxygen sensor electrical connector.
- 9. Remove exhaust manifold retaining fasteners.
- 10. Remove and discard manifold gasket.

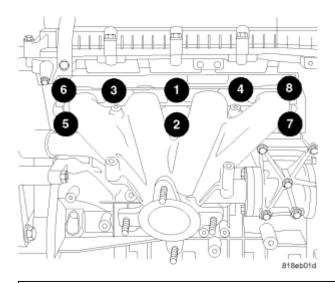

CLEANING

1. Discard gasket (if equipped) and clean all surfaces of manifold and cylinder head.

INSPECTION

- 1. Inspect manifold gasket surfaces for flatness with straight edge. Surface must be flat within 0.15 mm per 300 mm (0.006 in. per foot) of manifold length.
- 2. Inspect manifolds for cracks or distortion. Replace manifold as necessary.

INSTALLATION

2007 ENGINE 1.8L - Service Information - Caliber

Fig. 316: TORQUE SEQUENCE Courtesy of CHRYSLER LLC

- 1. Install a new exhaust manifold gasketDO NOT APPLY SEALER.
- 2. Tighten the exhaust manifold bolts to 34 N.m (25 ft. lbs.).

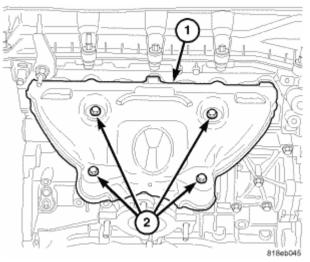

Fig. 317: EXHAUST MANIFOLD HEAT SHIELD Courtesy of CHRYSLER LLC

3. Install exhaust manifold heat shields. Tighten bolts to 12 N.m (105 in. lbs.).

VALVE TIMING

DESCRIPTION

TIMING DRIVE SYSTEM

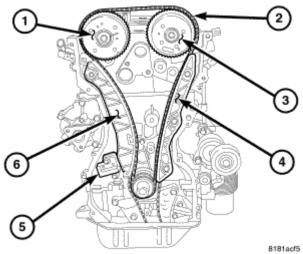

Fig. 322: TIMING DRIVE Courtesy of CHRYSLER LLC

The timing drive system consists of the following:

Timing Chain (2)

Camshaft Sprockets (1,3)

2007 ENGINE 1.8L - Service Information - Caliber

Crankshaft Sprocket

Right Timing Chain Guide (Moveable) (6)

Left Timing Chain Guide (Fixed) (4)

Timing Chain Tensioner (5)

The camshaft sprockets are attached to the cam phasers which are attached to the front of the camshafts and is used with the timing chain and crankshaft sprocket to turn the camshafts. The camshaft position sensors target is part of the camshafts and is used with the camshaft position sensors to provide the PCM with valvetrain position information.

The timing chain tensioner is installed in the right side of the engine block. Using engine oil pressure, the tensioner applies constant pressure to the right side (movable) timing chain guide, which in turn applies pressure to the timing chain. Also as the tensioner extends, it rachet locks in position to provide constant timing chain tension.

STANDARD PROCEDURE

VALVE TIMING VERIFICATION

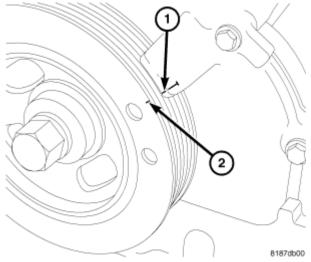

Fig. 323: TDC
Courtesy of CHRYSLER LLC

- 1. Remove engine cover.
- 2. Remove cylinder head cover. See REMOVAL.
- 3. Set engine to TDC (1,2).

2007 ENGINE 1.8L - Service Information - Caliber

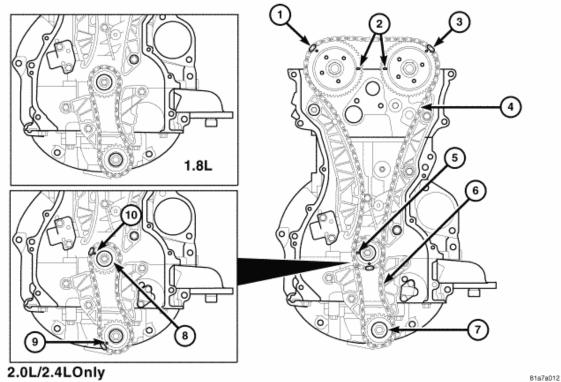

Fig. 324: TIMING MARKS
Courtesy of CHRYSLER LLC

- 4. The mark on the camshaft sprocket should be in line with the cylinder head cover sealing surface (2).
- 5. Verify that the painted or colored chain links (1,3) aligns with marks on camshaft sprockets.
- 6. Verify that the painted or colored chain link aligns with mark on crankshaft sprocket.
- 7. Install cylinder head cover. See **INSTALLATION**.

COVER-TIMING CHAIN

REMOVAL

2007 ENGINE 1.8L - Service Information - Caliber

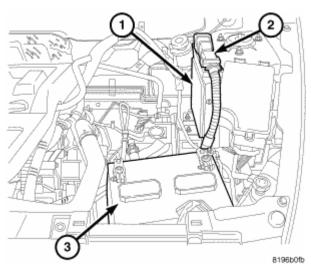

Fig. 325: BATTERY Courtesy of CHRYSLER LLC

- 1. Remove engine cover by pulling upward.
- 2. Perform fuel pressure bleed procedure. Refer to **STANDARD PROCEDURE**.
- 3. Disconnect negative cable at battery (3).

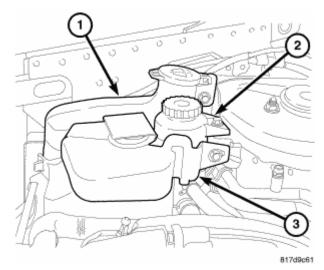

Fig. 326: Coolant Reservoir
Courtesy of CHRYSLER LLC

- 4. Remove coolant recovery bottle (3).
- 5. Remove windshield washer bottle (1).
- 6. Remove power steering reservoir (2) and set aside.

- 6. Remove timing chain (2).

CRANKSHAFT SPROCKET

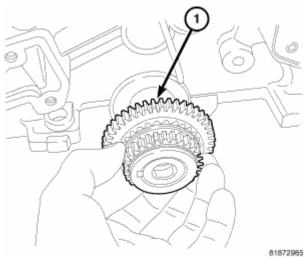

Fig. 356: Crankshaft Sprocket Courtesy of CHRYSLER LLC

- 1. Remove timing chain. See **REMOVAL**.
- 2. Remove oil pan. See <u>**REMOVAL**</u>.

2007 ENGINE 1.8L - Service Information - Caliber

- 3. Remove oil pump drive chain tensioner.
- 4. Remove oil pump drive chain.
- 5. Remove crankshaft sprocket (1).

INSPECTION

INSPECTION-TIMING CHAIN

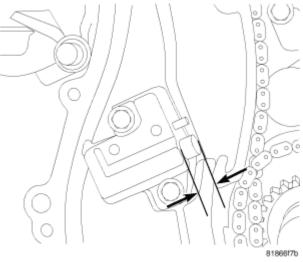

Fig. 357: Checking Timing Chain Stretch Courtesy of CHRYSLER LLC

Inspect timing chain for stretching prior to removal.

- 1. Rotate engine while watching timing chain tensioner plunger. When the plunger reaches its maximum travel stop rotating engine.
- 2. Measure the distance from the tensioner body and the edge of the chain guide as shown.
- 3. If the distance is greater than 20.5 mm (0.81 in.) inspect guide shoes for excessive wear.
- 4. If guides are okay, replace timing chain.

INSTALLATION

TIMING CHAIN

2007 ENGINE 1.8L - Service Information - Caliber

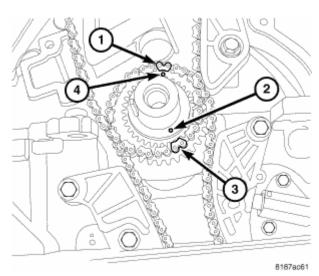

Fig. 358: Crankshaft Timing Marks Courtesy of CHRYSLER LLC

1. Verify that the crankshaft sprocket keyway is at the 9 o'clock position.

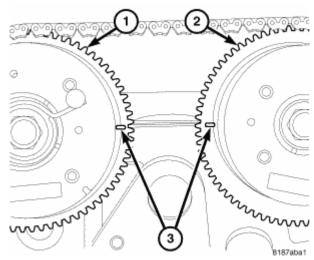

Fig. 359: CAMSHAFT TIMING Courtesy of CHRYSLER LLC

2. Align camshaft timing marks (3) so they are parallel to the cylinder head and aligned each other as shown.

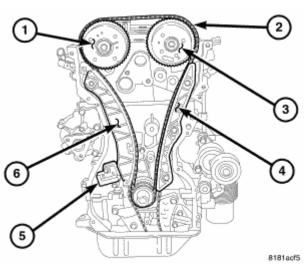

Fig. 360: TIMING DRIVE Courtesy of CHRYSLER LLC

3. Install timing chain guide (4) and tighten bolts to 12 N.m (105 in. lbs.).

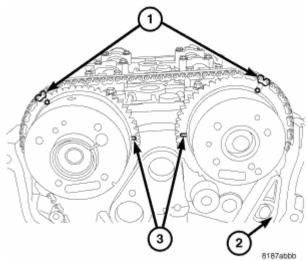

Fig. 361: Timing Chain Timing Marks Courtesy of CHRYSLER LLC

4. Install timing chain so plated links on chain align with timing marks on camshaft sprockets (1).

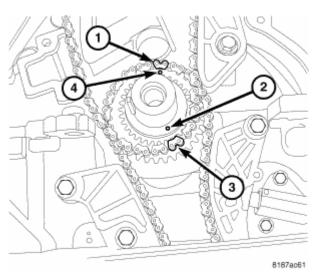

Fig. 362: Crankshaft Timing Marks Courtesy of CHRYSLER LLC

5. Align timing mark on the crankshaft sprocket (2) with the plated link (3) on the timing chain. Position chain so slack will be on the tensioner side.

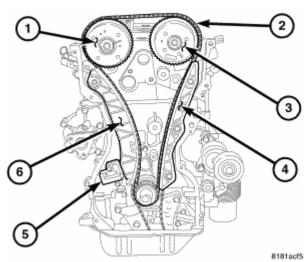

Fig. 363: TIMING DRIVE Courtesy of CHRYSLER LLC

NOTE: Keep the slack in the timing chain on the tensioner side.

6. Install the moveable timing chain pivot guide (6) and tighten bolt to 12 N.m (105 in. lbs.).

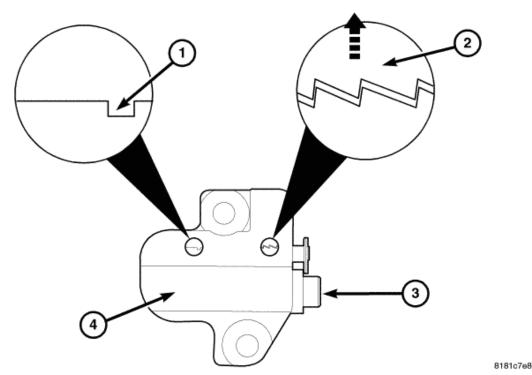

Fig. 364: TENSIONER RESET Courtesy of CHRYSLER LLC

7. Reset timing chain tensioner (4) by lifting up on ratchet (2) and pushing plunger (3) inward towards the tensioner body (4). Insert Tensioner Pin 8514 into slot (1) to hold tensioner plunger in the retracted position.

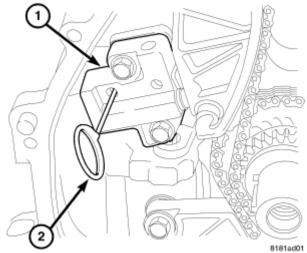

Fig. 365: Timing Chain Tensioner Courtesy of CHRYSLER LLC

- 8. Install timing chain tensioner (1) and tighten bolts to 12 N.m (105 in. lbs.).
- 9. Remove timing Tensioner Pin 8514 (2).

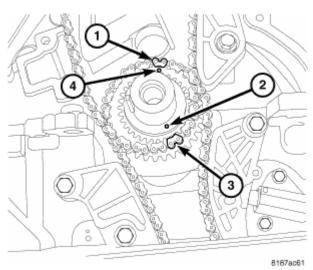

Fig. 366: Crankshaft Timing Marks Courtesy of CHRYSLER LLC

10. Rotate the crankshaft CLOCKWISE two complete revolutions until the crankshaft is repositioned at the TDC position with the key way at the 9 o'clock position.

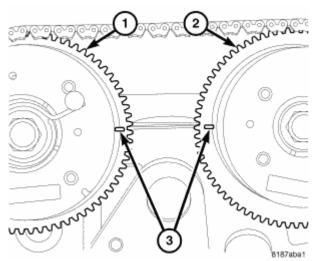

Fig. 367: CAMSHAFT TIMING Courtesy of CHRYSLER LLC

- 11. Verify that the camshafts timing marks (3) are in the proper position.
- 12. Install front timing chain cover. See **INSTALLATION**.

2007 ENGINE 1.8L - Service Information - Caliber

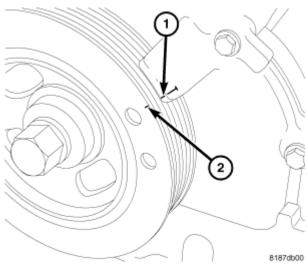

Fig. 368: TDC Courtesy of CHRYSLER LLC

- 13. Install the balancer and verify that balancer mark (2) and cover mark (1) are aligned.
- 14. Connect negative battery cable.
- 15. Fill with oil, start engine and check for leaks.

CRANKSHAFT SPROCKET

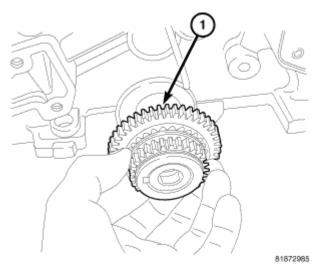

Fig. 369: CRANKSHAFT SPROCKET Courtesy of CHRYSLER LLC
